## The Quirk's Event Promo Video

Late last year we compiled every image and video clip on file from the 2018 Quirk's Events with the goal of creating a real, valuable event video and sent the files to an editing team. Their response: Sound quality? Awful. Videos? Shaky at best. Abandoning ship we decided to take a different route (and poke a little fun at ourselves in the process).

Enter, The Quirk's Event Promotional Video – Quirk's comical take on event videos. While we haven't exactly gone viral, the video has been reviewed as:

*"The most hilariously self-aware conference promo video ... ever."  
"A very funny promo video. Who can stay home after seeing this?"  
"Genuinely great."*

We hope you'll enjoy our comical take on event videos!

<https://youtu.be/umCMizfHT2U>

If you're interested in joining us at The Quirk's Event, visit [www.TheQuirksEvent.com](http://www.TheQuirksEvent.com) and learn more about our remaining 2019 shows in Brooklyn (March 5-6) and Chicago (April 2-3).

## For sensitive info, live agents preferred over chat bots

While chat bots can provide customers with quick answers to FAQs or issues, when it comes to handling sensitive financial and personal information, however, most customers are more comfortable with a live agent, according to research from San Francisco-based cloud contact center firm NewVoiceMedia.

Top concerns for using chat bots for service include: lack of understanding of the issue (65 percent); inability to solve complex issues (63 percent) or get answers to simple questions (49 percent); and lack of a personal service experience (45 percent). Forty-six percent also felt that bots keep them from reaching a live person.

When asked about transactions for which they would not feel comfortable using a chat bot, a significant majority of respondents said large banking (82 percent), medical inquiries (75 percent) and small banking (60 percent).

Customers prefer live agents for technical support (91 percent); getting a quick response in an emergency (89 percent); making a complaint (86 percent); buying an expensive item (82 percent); purchase inquiries (79 percent); returns and cancellations (73 percent); booking appointments and reservations (59 percent); and paying a bill (54 percent). The top benefit cited for dealing with chat bots was 24-hour service.

... data privacy

## Companies lag in consent-collecting

Sixty-one percent of companies surveyed said they are either not actively collecting customer consent data or they aren't sure, according to a survey from consent and preference management solutions firm PossibleNOW, Duluth, Ga.

The survey found that 25 percent of respondents say they are not collecting consent because they are waiting to see how GDPR laws are enforced; another 24 percent said they don't know enough about consent laws and 14 percent said that they do not believe they will be fined.

Twenty-six percent said they are still in the early phases of their consent system rollout and another 24 percent are only in the planning phases – meaning they have an intention to offer but still aren't doing so. In fact, only 25 percent said their consent management solution allows them to share data across all departments and divisions; and another 25 percent said they can maintain historical records for each customer, a critical component to any truly compliant consent system. This means that even though one division receives consent preferences from customers, another division also marketing to the customer base doesn't know their consent choices.

# In B2B, getting price wrong can be costly

It's been interesting in recent years to see more and more assertions that the B2B customer, who was previously thought to be focused on price and price alone, is actually subject to the same kinds of emotions that are regularly claimed to sway the average consumer.

As more and more creativity is applied to B2B research, beyond the dry market studies or superficial satisfaction surveys, we're learning – perhaps not surprisingly, since they are human beings after all – that factors like job security, saving face and good old-fashioned fear can and do impact the choices that B2B buyers end up making.

That said, price is still a big deal – and an area that many companies feel they need to work on, according to a Bain & Company survey of execs. The global survey of sales leaders, vice presidents of pricing, CEOs, CMOs and other executives at more than 1,700 B2B companies gathered their self-rating of 42 pricing capabilities and outcomes and found that 85 percent of them think they and their companies can improve their pricing strategies.

In articles in *Harvard Business Review* (“A survey of 1,700 companies reveals common B2B pricing mistakes”) and Bain's own outlets (“Is pricing killing your profits?”), Bain & Company's Ron

Kermisch and David Burns did deep dives into the findings to highlight some problem areas and solutions for them.

To understand the pricing-related capabilities that matter most, Bain studied a subset of top-performing companies, as defined by increased market share, self-described excellent pricing decisions and execution of regular price increases. As Kermisch and Burns note, the top performers are more likely to:

- employ truly tailored pricing at the individual customer and product level;
- align the incentives for frontline sales staff with the pricing strategy, encouraging prudent pricing through an appropriate balance of fixed and variable compensation; and
- invest in ongoing development of capabilities among the sales and pricing teams through training and tools.

Excelling at pricing pays off. Among the companies that do well in all three areas, 78 percent are top performers, versus just 18 percent of companies that excel in none of the three, Bain found.

Rather than using one-size-fits-all pricing strategies, the more-advanced companies tailor their pricing carefully for each combination of customer and product. They bring data and business intelligence (hello, marketing research!) to bear on three variables for setting target prices:

- the attributes and benefits that each

©Clare Pix Photography www.clarepix.com

Joe Rydholm can be reached at joe@quirks.com

- customer truly values – and how much value is created for them;
- the alternatives and competitive intensity in the industry; and
- the true profitability of the transaction after accounting for leakage in areas such as rebates, freight, terms and inventory holding.

Kermisch and Burns cite the example of a specialty chemical company that actively improved its pricing practices. It created forums for sharing best practices, trained product managers in fundamental pricing analysis and trained salespeople to have better pricing discussions with customers. New dashboards monitored progress toward pricing goals and flagged places where sales reps might be too aggressive or not aggressive enough. Finally, the CEO reinforced these measures by demanding that the product and sales teams report on pricing actions taken and results, so that effective pricing remained a high priority.

That last point about CEO involvement is key. Just as we've seen in the marketing research realm, when an organization's leaders make a large-scale operational change a personal mission and priority, things tend to happen. ①

## // Survey Monitor

... consumer psychology

### 'I know you'll love it'

Study looks at psychology of gift-giving

Have you ever bought a gift for a friend, simply because it's a gift that you would like yourself? If so, that was likely an instance of you projecting your own attitudes onto your friend, assuming your friend shared your preferences. Such activity is called "social projection" and was the focus of research from Baylor University's Hankamer School of Business.

The study, *I Love the Product, but Will You? The Role of Interpersonal Attachment Styles in Social Projection*, was authored by Meredith David,

assistant professor of marketing, and published in *Psychology & Marketing*. Research results are based on surveys of 1,272 people across five studies.

The research reveals that people who are secure in interpersonal settings are the ones most likely to engage in social projection (making choices on behalf of others based on their own preferences). Conversely, those who are anxious in such settings are less likely to assume that others share their own preferences and less likely to make choices for others based on their personal attitudes.

"You'd think that secure people with lots of friends and healthy personal relationships would have a better idea of what someone would like as a gift but that's not the case," David says. "This research shows that individuals who

are anxious in interpersonal situations and who have fewer close, personal relationships are better at predicting what a person may like."

Securely attached individuals, David says, are people who expect others will be available and supportive when needed. Anxiously attached individuals have less-positive expectations about interpersonal-related situations and constantly worry about relationships.

"The findings of this study are counterintuitive and contrary to much of the literature, which says secure attachments are most desirable and attachment anxiety is only associated with negative behaviors and outcomes," David says. "My research suggests that secure attachments may not always be the best or most optimal."

Secure individuals tend to be older, in a committed relationship and earn a higher income. Anxious individuals tend to be younger, single and earn a lower income. A securely attached person is more apt to choose a gift based on his/her own preferences. An anxious person is more apt to consider what the recipient may like and will make a choice based less on his/her own personal preferences.

"A key takeaway is that secure people [people who have healthy relationships and feel comfortable in interpersonal settings, etc.] should be mindful of their propensity to assume others like what they like," David says. "Gifts should be thoughtful and securely attached folks need to take caution when selecting and buying gifts. Importantly, these individuals should strive to put their own preferences aside when considering what others may like."

David says her research can impact many areas of the market, including gift-giving and marketing to gift buyers, as well as human resources and hiring. One example given in the study is that of a company that lists on its Web site

[www.quirks.com/articles/2019/20190203.aspx](http://www.quirks.com/articles/2019/20190203.aspx)

a group of products that have been deemed “good gifts” for purchase. Based on the results of this research, the company could see a greater return if its target market consists mainly of securely attached individuals.

“Specifically, the findings show

that less-anxious, more securely attached individuals are more likely to project their attitudes onto others,” David says. “Thus, it is likely that, while shopping online, [securely attached] individuals are more likely to assume that others would also like

products from that store.”

Thus, a potential sale.

David says human resources professionals and hiring managers may benefit by considering the attachment styles of job candidates and using the research to guide their evaluations as to

## ••• hispanic research

# Love of music drives Hispanic media use

## Radio still a key source

A proclivity for music, combined with a preference for everything digital, has made music an important online activity – both personal and social – for Latinx consumers, according to Nielsen. (Nielsen uses the term Latinx to connote unspecified gender. The decision is a nod toward greater inclusion of women, LGBT+ and non-binary Hispanics and the growing popularity of the term in social media and academic writing.)

Whether through streaming songs, watching videos or following a favorite artist on social media, digital media provide a seamless avenue for Latinx to embrace their deep attachment to their roots, as well as share their culture widely.

A deeper dive into how Latinx consume music reveals just how ingrained this art form is in Hispanics’ daily lives. In fact, Latinx consumers spend 32 hours a week listening to music, outpacing non-Hispanic whites and the total U.S. population. Radio – both online and terrestrial – remains a key source of music for Latinx, who consume far more radio than the total U.S. population. But while traditional radio consumption is steady, streaming audio consumption is really taking off.

Streaming has become the most popular source of Hispanics’ music listening, accounting for almost half of listening time. Moreover, 45 percent of Hispanics subscribe to a streaming service for music, radio and podcasts, more than non-Hispanic whites, who clock in at 40 percent. And there’s plenty of room for streaming subscription growth, as more than a third of Hispanics say they’re interested in signing up for a subscription service in coming months.

With such an ear for music, it’s no surprise that Latinx consumers have proven quick to adopt new technology to listen to it. More than one in five Latinx households owns a smart speaker, which is higher than the total population. These devices represent another strong opportunity for growth, as 58 percent of Latinx consumers say they want to acquire some type of smart speaker in the future, 16 percentage points higher than the total population.

Consider also that the average Hispanic consumer over the age of 13 uses four devices to listen to music, radio and podcasts each week. This shows a comfort and ease with using technological devices that will inevitably spill over to new platforms as they’re developed in the future. Thanks to their passion for music and inherent gregariousness, Latinx consumers have become leaders in digital-early adoption, incorporating online fluidly into their lives.

Moreover, it’s important to note that music is far more than a listening experience for Latinx consumers. In fact, 70 percent of Hispanics say they follow performers on social media sites, well above non-Hispanic whites. Of Latinx consumers who use YouTube, 88 percent go to the site to view music videos, while one in four share music video links with family and friends. For Hispanics, music represents an immersive, 360-degree engagement that forms a cultural touchstone in their social circles.

This strong support for music and musicians, plus the overall popularity of streaming, has boosted Latinx artists as never before. 2017’s phenomenal success of “Despacito” by Luis Fonsi and Daddy Yankee, and its remix featuring Justin Bieber, underscores this trend. The song was the year’s biggest in terms of sales and on-demand streaming. “Mi Gente,” by J. Balvin and Willy Williams with a Beyoncé remix collaboration, was another smash hit, selling 1.8 million copies via on-demand streaming and song sales. With the increased ability to reach universal audiences on digital access-for-all platforms, Latinx performers have now entered the mainstream consciousness.

For marketers and advertisers, music is clearly one of the most authentic and relevant paths to connect to Latinx consumers who, by the way, view brands that sponsor concerts and tours more favorably than others. Marketers should tune into music when designing strategies to develop meaningful relationships with Latinx consumers or risk losing the beat that drives this digitally savvy demographic.

which candidates may perform better in certain roles.

“For example, it is not uncommon that marketers and salespeople must predict preferences of the customers, at least as they relate to new products, pricing promotions, etc. Sales and product development positions may be better suited for anxiously attached individuals; whereas financial, technical or market research positions may be a better fit for secure individuals,” David says.

## ••• travel and leisure Bleisure is booming

More mixing business with pleasure

Domestic and international bleisure travel is booming and business travelers – those who extend their trip for leisure – are invested in making the most of their time away from home, according to a study by Expedia Group Media Solutions, the advertising arm of travel firm Expedia Group. The findings, from a multinational study conducted by Luth Research, spotlight the behaviors, influences, resources and preferences of American, British, Chinese, German and Indian bleisure travelers.

The study, *Unpacking Bleisure Traveler Trends*, shows that on average, across the five countries, bleisure travelers take more than six business trips per year and more than 60 percent of business trips during the last year were extended for leisure purposes. In the U.S., bleisure travel conversion is consistent with the multinational

average of 60 percent, revealing a nearly 40 percent increase in American bleisure travel since 2016.

On average, 72 percent of bleisure travelers said there are destinations they have visited or will visit in the future for business that they would like to extend for bleisure.

What makes a destination appealing for bleisure travel? Fifty-six percent said they are more likely to consider a bleisure trip in a destination with great food and restaurants, closely followed by approximately 50 percent influenced by beaches, weather, nature, historical monuments or sightseeing. This further validates the importance of experiences and activities for all travelers and illustrates an opportunity for marketers to attract bleisure travelers from around the world.

“By showcasing unique experiences and activities, which are influential factors during the decision-making process, every destination, hotel, restaurant, attraction, airline and more can entice business travelers to extend their trip for leisure,” says Andrew van der Feltz, senior director, EMEA and APAC for Expedia Group Media Solutions.

**Converting to bleisure.** Business trips lasting two to three nights are most likely to result in bleisure trips (50 percent), as are trips where the business destination is far away or more than 400 miles from home (49 percent). Leading factors that influence bleisure travel decisions include traveling to a destination with great entertainment (48 percent) and visiting an iconic or bucket-list destination (43 percent); easy-to-navigate destinations, proximity to the weekend and additional personal costs required to extend the trip for leisure are also influential factors.

**Bleisure research and booking resources.** Approximately 80 percent of bleisure travelers spend one to five hours on research during both the inspiration and planning phases, which is more condensed than more traditional leisure booking windows. Before deciding to bleisure, 68 percent

of travelers conduct research using a search engine, 47 percent use travel-related Web sites – including online travel agencies, airline and hotel sites and review sites – and 44 percent use destination Web sites. Most bleisure travelers personally research and book accommodations (61 percent), airfare (42 percent) and dining (38 percent) for the leisure portion of their trip.

**Willingness to travel for bleisure.** Two-thirds of past bleisure trips were in the same city as the business trip but more than 80 percent of bleisure travelers are willing to travel from the business destination for leisure. On domestic and international trips, more than 50 percent of bleisure travelers are willing to travel one to two hours via car from the business destination for the leisure portion of their trip and more than 28 percent would travel one to two hours via plane. When traveling domestically between the business and leisure destinations, 38 percent of bleisure travelers are unwilling to travel via bus and 25 percent are unwilling to travel via plane.

**Bleisure budgets and payment preferences.** Compared to a typical vacation, 57 percent of bleisure travelers spend the same amount of money or more on a bleisure trip and more than 75 percent save money specifically for bleisure travel. When on a bleisure trip, credit cards are the leading preferred payment method (69 percent), followed by cash (47 percent) and debit or ATM cards (44 percent). More than two-thirds of bleisure spend is allocated to hotel, airfare and dining for the leisure portion of the trip.

As for other takeaways for marketers:

**Bleisure travel is booming:** Sixty percent of business trips convert to bleisure and with travelers taking more than six business trips per year, on average, there’s a profound opportunity to reach and entice this valuable audience.

**Bleisure knows no boundaries:** There is nearly equal likelihood of bleisure travel for both domestic and international business trips and travelers are willing to travel away from

the business destination for leisure.

**Destination to-dos:** With nearly 70 percent of business trips being for conferences, there is an opportunity for destinations to encourage extending for leisure by highlighting activities and experiences to drive repeat visitation.

**Condensed path to purchase:** Most bleisure travelers spend less time on research than they would on a leisure trip, so marketers have a shorter window to strategically target and influence behavior and purchases with call to action messaging.

**In-market targeting:** Bleisure travelers may not book everything in advance, highlighting opportunities for marketers to reach and convert travelers in-trip – especially for ancillary products like dining, tours and activities, entertainment and transportation.

## ... financial services Different journey, different views

Longevity, life roles impact women's financial goals

A Merrill Lynch study finds that 70 percent of women believe that men and women have a fundamentally different life journey, reinforcing the need to better understand women's financial concerns and opportunities. The study, *Women and Financial Wellness: Beyond the Bottom Line*, conducted in partnership with Age Wave, is based on a nationally representative sample of 3,707 respondents, including 2,638

women and 1,069 men.

"Women have come a long way both personally and professionally but when it comes to their finances, there is still a trail left to blaze," says Lorna Sabbia, head of retirement and personal wealth solutions for Bank of America Merrill Lynch. "As women are at a tipping point to achieve greater financial empowerment and independence, it is even more essential that we support women in helping them pursue financial security for life. This includes encouraging women to invest more of their assets, save earlier for retirement, and pursue financial solutions that closely align to their personal values and life paths."

**Women look beyond the bottom line.** While they definitely care about the performance of investments, women view money as a way to finance the lives they want. Seventy-seven percent say they see money in terms of what it can do for them and their families. Eighty-four percent say that understanding their finances is key to greater career flexibility. When it comes to investing, about two-thirds of women look to invest in causes that matter to them.

**Superior longevity.** Longevity needs to be a factor in everyone's financial strategy but more so for women, who on average live five years longer than men (81 percent of centenarians are women). While 64 percent of women say they would like to live to 100, few feel financially prepared, with 44 percent of women stating they worry they will run out of money by age 80.

**Confidence in all but investing.** The study finds that women are confident in most financial tasks, such as paying bills (90 percent) and budgeting (84 percent) but when it comes to managing investments, their confidence drops significantly; only 52 percent of women say they are confident in managing investments, versus 68 percent of men. Millennial women were the least confident at 46 percent. Of women who do invest,

their financial confidence soars; 77 percent of women who invest feel they will be able to accumulate enough money to support themselves for life.

**A trail left to blaze.** The study also finds how important understanding the gender wealth gap (as opposed to the wage gap) and wealth escalators are to women's financial wellness. Women experience a gender wealth gap – the difference between men's and women's financial resources across their lifetimes, including earnings, investments, retirement savings and additional assets. This wealth gap can translate to a woman at retirement age having accumulated as much as \$1,055,000 less than her male counterparts. Contributing factors include the lasting effects women experience when they take time away from the workforce to provide care, including for aging parents, their own spouses and their own children. One in three mothers who returned to the workforce after caring for children says she took on less-demanding work, which resulted in lower pay. Twenty-one percent say they were paid less for the same work they did previously. Also, the average woman is likely to have higher health costs than the average man in retirement – paying an additional \$195,000 on average – due to living longer and having to rely on formal long-term care in later years.

"Women's life journeys are not only different than men's, they're different than the life journeys of our mothers and grandmothers," says Maddy Dychtwald, co-founder and senior vice president of Age Wave. "We have more opportunities and choices when it comes to family, education and careers but we're so busy taking care of other people and other priorities, we often don't take the time to invest in ourselves and our future financial wellness. If more women can actively take control of their financial future all along the way, it would benefit them, their families and our society overall."

## IN FOCUS

# Product and Service Update

## ••• quantitative research Automation tool from InSites Consulting

DIY or with help

Consumer insight agency InSites Consulting has released Fluent, an end-to-end research automation tool for clients that integrates all aspects of setting up and running a quantitative test among consumers. The platform allows research users to create and deploy research studies at their convenience, with a turnaround time of two to three days from the initial setup to the final insight delivery. The process can be run fully DIY or co-piloted with a solution-driven professional to ensure strategic input into the process and value-add interpretations of findings. The validation solutions offered through Fluent will be tailored to the needs and wants of individual clients to offer a desired level of customization. In addition, the Fluent platform will be integrated into InSites Consulting's community platforms, aiming to unlock an additional layer of efficiency by having the same participants collaborate across multiple studies. The Fluent platform was originally developed by South African insights agency Columinate, which was acquired by InSites Consulting in October

2018. The software is now a part of InSites Consulting's global offering. [www.insites-consulting.com](http://www.insites-consulting.com)

## ••• qualitative research Portable streaming solution for focus groups

Includes curation tools

Technology-based solutions company Civicom has launched CCam focus, a portable streaming media and video recording solution for live, in-person focus groups. The solution is now part of Civicom Marketing Research Services group. CCam focus is supported by a live Civicom technician and includes video curation tools, allowing researchers to review video recordings, create video tags, mark up key moments, create video clips for reports and order machine or human transcripts that match video frame-for-frame. CCam focus equipment can be used in a facility where video recording and streaming exists. It is an alternative to existing facility-based recording hardware and software and requires no installation. Weighing less than seven pounds, it can be carried from one facility to another or from room to room and can be used anywhere in the world.

## ••• media research Get in-the-moment feedback with Harris PopUP Live

Uses Toluna technology

Digital research agency Harris Interactive has launched Harris PopUP Live, an online discussion platform that allows TV, radio and online broadcasters to gain in-the-

moment feedback from viewers and listeners tuned into a specific show while it's on-air. Broadcasters can view, download and control the conversations as members share reactions, likes and dislikes in a moderated discussion. The platform is powered by Toluna technology and is built around Harris Interactive's PopUP Community platform. The platform is managed by Harris Interactive's specialist media researchers, with a discussion guide specific to individual client needs. Clients are able to view and download insights instantly or access clean transcripts and analysis from the day after transmission. [harris-interactive.com](http://harris-interactive.com)

## ••• shopper insights Follow the path to purchase

Research Now SSI offering combines data sources

Plano, Texas, company Research Now SSI has introduced its SamplePlus Meter solution. Through a partnership with cross-media measurement firm RealityMine, SamplePlus Meter combines observed data from online Web, app and search behavior with Research Now SSI's panel data, integrated third-party data sets and its library of profile attributes, allowing marketers, brand advertisers and agencies to identify specific audiences and understand customer touchpoints along the path-to-purchase. SamplePlus Meter is designed to provide precise audience selection and near-real-time feedback. RealityMine's meter technology passively monitors activity from personal computers, tablets and smartphones with the participant's permission, providing insights to understand how consumers research their purchasing decisions. The permission-based SamplePlus Meter solution collects global behavioral data including: Web and app usage such

as social media and commerce sites; search terms such as “restaurants near me” or “cold remedies;” in-app media from media service providers; and Amazon e-commerce funnel activity including purchases.

# Statistical inference about Net Promoter Scores

| By Albert Madansky

## snapshot

Albert Madansky explains how to perform statistical comparisons of Net Promoter Scores.

The widely used Net Promoter Score (NPS) was introduced in Reichheld (2003) and is calculated based on responses to a single question: “How likely is it that you would recommend our company/product/service to a friend or colleague?” where the response is given based on a 0 to 10 scale. Respondents with scores of 9 or 10 are called Promoters, those with scores of 6 or below are called Detractors and those with scores of 7 or 8 are called Passives. The NPS is defined as 100 times the difference between the fraction of Promoters and the fraction of Detractors in the sample. There are a number of contexts in which researchers are interested in comparing NPSs to see if they are significantly different. In this article I will set forth the basic principles for performing such statistical comparisons.

### Multinomial distribution basics

Consider a multinomial population with  $k$  categories whose corresponding means are  $\theta_1, \dots, \theta_k$ . Assume that we have a random sample of  $n$  observations from this population, with observed category proportions  $p_1, p_2, \dots, p_k$ , where

$$\sum_{i=1}^k p_i = 1$$

Since the sum of the  $p$ 's is 1, the  $p$ 's are negatively correlated (if one of the  $p_i$  is large the other  $p_j$ s will perforce be small).

Suppose we wish to test the hypothesis that

$\theta_1 = \theta_2$ , based on the statistic  $p_1 - p_2$ . As shown by Wilks (1940), the standard deviation of the statistic  $p_1 - p_2$  is

$$\sqrt{\frac{\theta_1(1-\theta_1) + \theta_2(1-\theta_2) + 2\theta_1\theta_2}{n}} = \sqrt{\frac{\theta_1 + \theta_2 - (\theta_1 - \theta_2)^2}{n}}$$

Since the  $\theta$ 's are unknown, we estimate them by their sample estimates and use as an estimate of the standard deviation of  $p_1 - p_2$  the quantity

$$s = \sqrt{\frac{p_1 + p_2 - (p_1 - p_2)^2}{n}}$$

A common error made by those comparing two percentages from a multinomial distribution is to treat them as independent. In doing so they erroneously calculate the estimated standard deviation as

$$\sqrt{\frac{p_1(1-p_1) + p_2(1-p_2)}{n}}$$

thereby underestimating the standard deviation and hence declaring non-significant differences as significant.

To apply this to NPS we let  $k=3$ , with subscript 1 representing Promoters, subscript 2 representing Detractors and subscript 3 representing Passives. Then (except for a factor of 100)  $p_1 - p_2$  is the NPS and  $s$  given above is an estimate of the standard deviation of the NPS. If therefore one wanted to compare two NPSs, say  $L_1$  and  $L_2$ , computed from two independent samples of sizes  $n_1$  and  $n_2$ , respectively, one would calculate the z-statistic

[www.quirks.com/articles/2019/20190205.aspx](http://www.quirks.com/articles/2019/20190205.aspx)

$$z = \frac{L_1 - L_2}{\sqrt{\frac{p_{11} + p_{21} - (p_{11} - p_{21})^2}{n_1} + \frac{p_{12} + p_{22} - (p_{12} - p_{22})^2}{n_2}}}$$

where  $p_{11}$  and  $p_{12}$  are the Promoter fractions and  $p_{21}$  and  $p_{22}$  are the Detractor fractions in the respective independent samples.

Some researchers cleverly code the Promoters as 1, the Detractors as -1 and the Passives as 0, calculate  $L_1$  and  $L_2$  as the averages of these coded data and then use the two-sample t-test to test the significance of the difference. This leads to a minor error, which can be seen from the following analysis. One of the computations in facilitating the t-test is the calculation of the sample variance of  $L_a$ . Let the scores of the  $n_a$  respondents be denoted as  $y_1, \dots, y_n$ . Then the sample variance for sample a ( $a = 1, 2$ ) is calculated as

$$s_a^2 = \frac{\sum_{j=1}^{n_a} y_j^2 - (\sum_{j=1}^{n_a} y_j)^2 / n_a}{n_a - 1} = \frac{n_a(p_1 + p_2) - (n_a(p_1 - p_2))^2 / n_a}{n_a - 1}$$

and the squared standard error of  $L_a$  is calculated as

$$\frac{s_a^2}{n_a} = \frac{p_1 + p_2 - (p_1 - p_2)^2}{n_a - 1}$$

instead of as

$$\frac{p_1 + p_2 - (p_1 - p_2)^2}{n_a}$$

While this error is negligible for large samples, it can make a difference for small samples.

### Weighting

To develop the comparable procedure when the data are weighted, assume that the j-th member of the sample is given weight  $w_j$ ,  $j=1, \dots, n$ . We represent the data as a collection of nk 1's and 0's, with  $x_{ij}$  being a 1 if respondent j responded positively to category i and  $x_{ij}=0$  otherwise. Then for example  $p_i$  can be written as

$$p_i = \frac{\sum_{j=1}^n x_{ij}}{n}$$

The weighted  $p_{wi}$  can be expressed as

$$p_{w1} = \frac{\sum_{j=1}^n w_j x_{1j}}{\sum_{j=1}^n w_j}$$

The determination of the standard deviation of the statistic  $p_{w1} - p_{w2}$  is based on the following:

$$V(p_{w1} - p_{w2}) = V\left[\frac{\sum_{j=1}^n w_j x_{1j}}{\sum_{j=1}^n w_j} - \frac{\sum_{j=1}^n w_j x_{2j}}{\sum_{j=1}^n w_j}\right]$$

$$= \frac{\sum_{j=1}^n w_j^2 V(x_{1j} - x_{2j})}{(\sum_{j=1}^n w_j)^2}$$

But

$$V(x_{1j} - x_{2j}) = V(x_{1j}) + V(x_{2j}) - 2Cov(x_{1j}, x_{2j})$$

$$= \theta_1(1 - \theta_1) + \theta_2(1 - \theta_2) + 2\theta_1\theta_2$$

So

$$V(p_{w1} - p_{w2}) = \frac{\theta_1(1 - \theta_1) + \theta_2(1 - \theta_2) + 2\theta_1\theta_2}{f}$$

where f is the effective sample size, called the "design effect" by Kish (1965, Section 8.2, p. 258).

$$f = \frac{(\sum_{j=1}^n w_j)^2}{\sum_{j=1}^n w_j^2}$$

Since the  $\theta$ 's are unknown, we estimate them by their sample estimate and use as an estimate of the standard deviation of  $p_{w1} - p_{w2}$  the quantity

$$s = \sqrt{\frac{p_1 + p_2 - (p_1 - p_2)^2}{f}}$$

If therefore one wanted to compare two NPSs, say  $L_{w1}$  and  $L_{w2}$ , computed from weighted data from two independent samples of effective sample sizes  $f_1$  and  $f_2$ , respectively, one would calculate the z-statistic

$$z = \frac{L_{w1} - L_{w2}}{\sqrt{\frac{p_{11} + p_{21} - (p_{11} - p_{21})^2}{f_1} + \frac{p_{12} + p_{22} - (p_{12} - p_{22})^2}{f_2}}}$$

### More complex comparisons

Market researchers may sometimes compare NPSs from samples that may not be independent. One might ask a respondent the basic rating question about two different products. To complicate matters, some respondents may only rate one of the products rather than both. Obviously the ratings are correlated (because we may have the same respondent rating both products), so that the NPSs are correlated. To further complicate matters, the responses to each of the products rated by those respondents who rated both products may be assigned different weights.

Another scenario is one where the basic rating question is asked about a product and then the sample is split into (not necessarily separate) subgroups and one wants to know if the average NPSs are different for these subgroups. For example, we may ask whether the average NPS for users of Product A is different from that of Product B, where some of the respondents are users of both products. Again, to further complicate matters, the respondents may be weighted differently for product A and for Product B. The Analytical Group has developed appropriate statistical procedures to handle all these complexities, which have been incorporated into the newest version of WinCross. 

Albert Madansky is H.G.B. Alexander Professor Emeritus of Business Administration, Chicago Booth School of Business, University of Chicago. He is also vice president, The Analytical Group Inc., a Scottsdale, Ariz., research firm. He can be reached at [albert.madansky@analyticalgroup.com](mailto:albert.madansky@analyticalgroup.com).

••• b2b research

# Overcoming inertia

How to understand sporadic customer journeys in low-involvement B2B categories

| By Jeana McNeil

## snapshot

By using market insights to explore the buyer journey and decision process for low-involvement categories, B2B suppliers can separate themselves from competitors.

Set it and forget it is the attitude in many low-involvement B2B categories – data security, business insurance, telecommunications, commodity inventory, etc. These categories of products and services are important to the customer’s business but are often seen as necessary backroom operations that add costs. As such, inertia keeps most businesses from proactively evaluating alternative approaches or vendors. If the product or service is good enough businesses don’t have the motivation to evaluate their options. If the product or service is high-risk or complex it creates further obstacles: There are stacks of behavioral economics research that show people, including business buyers, are risk-averse.

Due to the set-it-and-forget-it approach, the purchase journey for products and services in this category consists of long stretches of inertia, interspersed with periodic spikes of intense interest in alternatives (Figure 1). During the inertia phase businesses pay little attention to the category. They don’t think about how things could be better or stay aware of vendors, etc. They remain happy with (or at least accepting of) the status quo until a product/service failure or a significant price increase jolts them out of their comfort zone. Then their attention to the category spikes; they scramble to find a vendor that can address their acute pain points. They reach out to peers and advisors, conduct online searches, read online reviews, take sales calls, etc.

But this intense interest isn’t always enough to overcome the status quo. As prospects begin to review their options a different type of inertia sets in: The hurdles and challenges inherent in internal purchase processes stall the decision. Buyers often decide that it would take too much effort to switch or that there is too much risk in doing so and opt to stay with the incumbent vendor.

[www.quirks.com/articles/2019/20190206.aspx](http://www.quirks.com/articles/2019/20190206.aspx)

## Inertia returns

Once a prospect makes their decision to switch vendors, or maintain the status quo, their inertia returns. They stop paying attention to the category and their awareness of vendors and alternative approaches rapidly dissipates.

This buying cycle creates significant challenges for vendors that operate in these categories. If your product or service is a low-involvement one, convincing prospects that it's worth their time to look around outside of their sporadic spikes in interest may require more sales and marketing resources than you have available. The most effective approach for many B2B vendors is to ensure they are positioned to take advantage of the opportunities that arise.

This article presents four categories of insights that market insights teams can use to help their companies take advantage of these types of sporadic opportunities. These include: understanding the failures that prompt vendor evaluation; identifying where prospects go for information; understanding the requirements for a replacement solution; and mapping the last mile of the buying process in more detail. We also suggest several approaches to collect and consolidate the insights.

**Understand the failures.** The trigger to act in low-involvement categories tends to be a failure or cost increase rather than a proactive desire to improve the status quo. Your sales and marketing can speak directly to these motivations if you understand the what, where, why, who and how of the typical failures that motivate prospects to evaluate vendors: You understand their pains and can assure them that these failures will not happen with you. Convincing a prospect that the failures they experienced will not happen with you will be as compelling as the additional benefits your company provides. If a prospect feels at risk of the same type of failure with a new vendor, they have little motivation to switch.

**Be where prospects look.** Although the product or service may be important to their business, prospects often look at just a handful of vendors: those they've used before, are familiar with, find in a simple online search, know their peers use or are recommended by their trusted advisors. To improve the likelihood of being in this initial consideration set, B2B vendors should:

- Keep track of, and contact with, individual customers and prospects when they move to new employers.
- Attend industry events as a sponsor or attendee.
- Identify the trusted advisor channels you can feasibly influence.
- Invest in optimizing search results.
- Advertise to maintain brand awareness (this varies in importance by market).

## Value of insights is clear

The role and value of market insights is clear. B2B vendors need to allocate their sales and marketing resources in the right places and most vendors don't have the budget to be everywhere. Is it better to spend the money to be at the national trade show or to run print ads in an industry journal or optimize your online ad placement? Research can help prioritize sales and marketing activities.

**Understand all of the requirements.** During the sales process, it is important to distinguish between the trigger that prompts a vendor review/search versus the criteria that drive the purchase decision. A specific problem causes the buyer to investigate other solutions. The new solution must solve that problem, plus satisfy a range of additional critical buying criteria. Consider this example: An incumbent server-based technology crashes, creating weeks of disruption as the prospect gets their system and data back up and running. Your solution attracts the prospect with a message about a modern user interface (UI) and a cloud-based application that is always available. However,

Figure 1

## Low-Involvement Purchase Journey

the criteria that will actually drive the decision may be very different: In addition to the UI, the prospect needs a reliable, compliant, cost-effective solution that integrates with its other mission-critical systems.

**Map the last mile.** When a vendor is in the right place at the right time, it still may be stymied by a no-decision. Research by CEB<sup>1</sup> indicates that the frequency of stalled B2B purchase decisions is on the rise as the buying process has become more consensus-driven. Decisions can be paralyzed by the array of solutions available, the volume of information vendors provide about their solutions and the increasing number of stakeholders involved in each purchase.

Instead of feeling empowered by the information available, buyers become overwhelmed. This is especially true in low-involvement categories where the prospect hasn't thought about the issues prior to their sudden spike in interest. It can be easier for a buyer to maintain the status quo rather than face the uncertain benefits of a replacement.

One way to address this issue is to take a prescriptive approach to selling. When prospects reach out to vendors, most still need to understand what solutions best fit their needs and whether they should switch at all. They weren't necessarily thinking about other vendors, or the category at all, before the failure. Buyers seek multiple options and ask

for more information because they don't really know what they need; they hope that one of the options presented will stand out as the right choice for them. Instead, the opposite occurs: Too many options overwhelm and complicate the decision. The CEB research shows that vendors that take a prescriptive approach – provide a recommendation with a clear rationale instead a series of options – close significantly more deals. That said, it is important for your recommendation to be in line with the core drivers of the prospects purchase motivation. Prospects tend to reject solutions they view as too broad in scope relative to what started them down their purchase journey. Put another way, address the acute pain point first, before expanding to all the other things your product can do.

### Research can support strategies

Marketing research can support strategies to improve effectiveness and win-rates during the “last mile” of the prospect buying process. When B2B marketers map the buying journey, the focus tends to be on building awareness and consideration, where marketing has the most responsibility. However, close attention to mapping the journey once a prospect engages with the sales team can help close more deals by providing insights into:

- How knowledgeable and informed

the typical prospect is when they begin to interact with the sales team. This helps marketers and the sales team set a baseline for creating materials and processes that speak to prospects in a way, and at a level, they can understand.

- The two or three main drivers of the buyer's purchase intent outside of the failure that triggered the evaluation process. Even when buying the most complex product, most prospects are focused on improving a handful of key activities. This helps marketers and sales teams speak to the benefits that prospects care most about.
- The internal barriers your internal champion is likely to encounter, so that you can provide data and recommendations for how they can overcome them. Once your champion is sold, the deal can still be derailed without internal consensus.

### Illuminate the journey

Mapping the customer journey and decision-making process requires data. This can be a challenge in low-involvement categories; sporadic, unpredictable sales make it difficult to find and conduct research with customers/prospects that recently switched vendors. That said, there are still a variety of research tools and data sources available that can illuminate the customer journey. These range from informal internal interviews to robust market surveys. The following is a review of tools and data sources and how they can provide individual insights to create a more comprehensive view of the customer buying process.

**Internal interviews with sales/account reps.** Sales and account reps often have more direct contact with customers and prospects than anyone in the organization. They can provide insights into: the types of problems and solutions that prospects ask them about; how prospects find out about the company; and the decision factors that drive prospect decisions.

It is important to recognize that sales/account reps view clients and prospects through a narrow lens and bring with them a set of biases and

interpretations. That said, an open-ended conversation with a handful of reps can provide useful insights with no more investment than the time it takes to conduct the interviews.

If reps are not accessible, lead-generation systems often track the customer's reason for contacting the vendor or the specific message/ad that created the lead. An analysis of these data can identify patterns in the pain-points that prompt outreach.

**Qualitative interviews with customers.** Recent customer acquisitions are an important data source. The insights team can identify relatively new customers (e.g., became a customer within the past one to two years) and conduct in-depth interviews to explore: the trigger that initiated the investigation; how they identified the vendors they evaluated; their vendor evaluation criteria; and their buying process.

Research with customers that switched enables a focus on demonstrated behaviors rather than the predicted behavior. People generally do a poor job of predicting where they would look for information and how thorough an investigation they would conduct. That said, this approach has limitations because memory fades quickly. One way to overcome this hurdle is to explore these topics as part of a win/loss program. These questions can be added without significantly increasing the length of a win/loss survey or in-depth interview.

**Win/loss interviews.** The most current and accurate information about why prospects consider switching vendors, where they look for information and their buying process can be gathered by including the exploration of these factors in your win/loss program. This will help distinguish between the messages and criteria that drive consideration vs. purchase decisions.

**Market needs survey.** A quantitative market survey can identify the most common and

persistent problems that drive dissatisfaction. It can also help identify the full range of criteria a replacement solution must satisfy.

**Customer satisfaction survey.** Customer satisfaction data can be a surrogate for the broader market if the data are used judiciously. The factors that drive customer behavior are often similar in nature to those that drive prospects. You can review existing data

## Conducting a survey to assess brand equity among your target audience allows a firm to determine its strengths and weaknesses as well as those of its competition.

and/or add a few relevant questions to your VOC program to identify the factors that diminish satisfaction. Factors that make your customers unhappy likely do the same for your competitors' customers.

**Data science.** Another emerging option is insights from applied data science firms. These are the big data vendors that consumer brands use to identify the Web sites their target markets are more likely to visit and

the type of content they search for. The vendors in this category are just starting to expand into B2B sectors so their application is still limited. But it is something that may soon have a place in the insights team's toolbox.

### Create a cohesive story

Market insights play an important role in increasing win-rates in low-involvement B2B categories. Most organizations will need to combine data from multiple studies and sources to create a cohesive story and develop recommendations for the marketing and sales teams. The effort and time involved in this work can provide meaningful competitive differentiation for companies that compete in low-involvement categories. The companies

willing to do the work will be well-placed to take advantage of the opportunities that arise. <sup>1</sup>

# Looking beyond sales

The value of B2B brand equity

| By Carly Fink

## snapshot

Yes, sales are important but B2B companies also need to gather and track other measures.

Business-to-business (B2B) is often more sales-driven than its business-to-consumer (B2C) counterpart. In this type of environment, advertising and building a brand are crucial even if there is a strong sales force in place. Advertising supports the full B2B customer sales journey by helping to generate awareness and leads for the sales team and by reinforcing satisfaction with the brand. Even if a B2B firm is more sales focused, this article will address why it is important to monitor your branding and advertising initiatives as well as evaluate the success of your brand compared to the competition.

In addition, the article will also include how to monitor the impact of the sales team when evaluating the organization's brand equity. As the media mix has become more complex and companies are producing substantially more content than ever before, the relationship between sales and advertising is even more intertwined. Firms need to consistently monitor and evaluate the role of sales and advertising and its impact on the company's acquisition and retention rates.

### Considered secondary

B2B organizations should recognize the value of brand equity (brand health) and the need to understand their brand equity as compared to the competitive landscape. Often, in sales-driven firms, brand equity and advertising are considered secondary. There is a misconception that brand equity is only valuable in the B2C space. Only 14 percent of B2B marketing decision makers find brand equity a key performance indicator (KPI) metric when evaluating their firm. Research shows customer satisfaction and revenue are the most utilized criteria. By solely using these criteria as KPIs, a company is only viewing the outcome. In contrast, utilizing brand equity as a KPI metric will allow companies to understand how to improve different aspects of the customer sales journey.

Also, organizations do not operate in a bubble. Competition plays a

[www.quirks.com/articles/2019/20190207.aspx](http://www.quirks.com/articles/2019/20190207.aspx)

critical role that impacts sales and retention rates. For B2B companies, intimately knowing the competitive landscape can help them understand what your brand is doing better than other firms, as well as determine areas that need improvement. Evaluating your brand and the competition by only using KPIs such as sales and customer satisfaction does not lead to a clear comparison of your customer sales journey versus key competitors.

In order to improve and better understand the customer sales journey, brand equity in a sales-driven environment needs to be evaluated and monitored. Brand equity measures consumers' awareness, association, perceptions of quality and loyalty and while it's not often utilized in the B2B space, it really should be considered essential.

There are several challenges related to the monitoring of equity for B2B brands. Often drivers that influence the brand equity score can vary by industry, company size and the specific audiences targeted by the company. Depending on the sector, sales teams may be more influential and in other organizations, different marketing channels may take on a larger role (e.g., conferences).

### Create a relationship

The B2B audience is typically more rationally driven by logic and relationships, while consumers tend to be more emotionally driven. Prospects are more likely to look for attributes such as most innovative, best reputation and thought leadership when selecting a company. B2B brands need to prove their expertise and create a relationship with the client.

As compared to B2C, the B2B consumer sales journey is significantly more complex. A few key reasons include:

- Products/services may be complicated and prospects need to be educated prior to making a purchase decision.
- There are several decision makers and the procurement department often

influences and slows down the process.

- The gratification of the product or service may take longer, as it may need to meet long-term business objectives.

While B2B advertising efforts most likely exclude advertising on television, Facebook, YouTube or radio, there are several media channels that may be relevant. Conferences, brochures and sales calls are examples of traditional B2B channels. Digital channels may include e-mail, paid and organic search, content marketing and LinkedIn. Whatever marketing channel is used by a firm, it is key to understand its significance in influencing the consumer sales journey.

In the business-to-business environment, personal interaction and the relationship between the sales force and the customer are essential. Along with the quality of the human interaction, salespeople communicate the brand perception, explain the product/service and negotiate the cost. As a result, in a sales-driven company, the sales team directly influences brand equity. The sales team is a personal channel directly delivering the brand's benefits. Their goal is not only to acquire new customers but also to retain the long-term relationship with current customers.

A company needs to know the strengths and weaknesses of its sales force and also the impact of the sales force on its brand equity score. When evaluating the sales force, several factors influence the success of the team such as knowledge of the company and the products, social competencies, communication skills, professionalism, trust, motivation and even demographic attributes.

### A comprehensive assessment

Conducting a survey to assess brand equity among your target audience allows a firm to determine its strengths and weaknesses as well as those of its competition. Prior to conducting quantitative research, secondary research and in-depth interviews can help to better develop the appropriate design of the questionnaire. Also, it helps to provide a comprehensive assessment of the consumer sales journey.

## Competitive intelligence

Prior to conducting primary research, secondary research can help gain a better understanding of the landscape. It ensures that your primary research is as impactful as possible.

The first step is to determine the primary competition. As opposed to evaluating a long laundry list of competitors, select the three-to-five most important companies that you would like to benchmark. To gain a full perspective of the landscape, select a few of the largest revenue producers in the industry, as well as new competitors with significant upside potential.

Once the list is chosen, it is essential to look at the firm and competition customer journey and try to answer the following questions:

- What does the sales funnel look like?
- What is the role of the sales team?
- What is the marketing mix?
- What are the products or services offered?
- What is the unique selling proposition (if there is one)?
- What are the strength and weaknesses?

In many cases, access to competitive intelligence may be limited. Some simple methods for collecting this

information include: visiting Web sites and social media pages; signing up for e-mails and whitepapers; and attending trade shows/events.

Purchasing low-cost marketing analytic tools such as SEMrush can provide a better understanding of the digital advertising landscape by providing intel on Web traffic, SEO, SEM and display ads.

## In-depth interviews

Prior to conducting brand equity research, conducting in-depth interviews among prospects and customers can be extremely informative. Given that research for businesses can be more challenging than consumer research, half-hour online or phone interviews are often a successful approach to reach this target as they offer flexibility for respondents to choose a convenient time to be interviewed, thus increasing their willingness to participate.

The interviews evaluate your organization and the competition in regard to: context surrounding the decision-making process and determining pain-points during the consumer sales journey; the relationship between customers and the sales team; brand preference – why customers prefer one

company over others; how the needs of customers differ when selecting a brand.

## Brand equity survey

When developing the questionnaire to measure brand equity it is important to think about the full consumer sales journey as well as take into account your findings from previously conducted research.

Based off of the consumer sales journey, the structure of the survey should include the following four areas:

**Memorability:** How familiar are they with the brand? Is it top of mind during the selection process?

**Exposure:** What type of interaction do they have with the brand? Marketing channels? Sales team? How do they learn about the brand?

**Perception:** What characteristics resonate (e.g., innovative, trustworthy, thought leaders, cost)? Which brand(s) is preferred?

**Short- vs. long-term relationship:** What is the relationship with the company (prospect, current customer, lapsed customer)? How satisfied are you with the brand? Would you refer the brand to a colleague?

The competitive intelligence and in-depth interviews provide a concise list of competitors, market/sales materials and attributes to include in the questionnaire that will be developed.

After the survey is fielded, results will indicate how a company is performing relative to its competitors and communication methods. Advanced analytics, such as linear regression, will determine which marketing channels have the highest correlation to drive awareness, consideration and, ultimately, a purchase. This type of analysis will also show the influence of the sales force throughout the consumer sales journey.

The outcome of this research will not only help a B2B company determine where to allocate the money for the highest return but also determine its strengths and weaknesses relative to the competition.

# Companies are people too

Considerations in building a B2B CX program

| By Claire Sporton

## snapshot

The importance of considering the roles of individuals in a company's purchasing process.

As we hit 2019, you can hardly move for people stating that the customer experience is the last true battleground for consumer markets. Expectations are sky-high, fueled by companies like Amazon that deliver levels of personalization, self-service and ease-of-use that sometimes seem to border on witchcraft. Get it wrong and you're in trouble, it's as simple as that.

But that's consumer markets. Surely it's not the same for business-to-business companies? Actually, it is. Or at least, it's not far off.

For organizations operating in a B2B environment, the customer experience is a critical consideration too, a fact that's become clearer and clearer over the past five years or so. As in the business-to-consumer world, it is often the last true battleground for competitive differentiation and client retention. But with fewer customers and dramatically larger deal sizes, the stakes are higher. There is also a much more complex relationship to consider. Rather than one individual making a purchase from another individual, there are most likely teams of several stakeholders on each side, each of whom has different expectations, different organizational levels and segmented experiences at varying touchpoints.

That said, is building a customer experience program in a B2B environment fundamentally different from that task within a B2C organization? The short answer is no. The longer answer is: no, but there are some areas where you will need a different approach.

### Precious clients

It can be tempting to launch into a new program and start capturing customer feedback without thinking clearly about key issues such as how you'll use data, how you'll share data and what the actual experience of being approached for feedback will be like for your clients. This is unwise in any situation but especially so in a B2B world where you are dealing with fewer, more precious clients with long-term relationships with your organization. Your client base may be "semi-captive," in fact, if your market segment is fairly specialized. How

[www.quirks.com/articles/2019/20190208.aspx](http://www.quirks.com/articles/2019/20190208.aspx)

do you keep that relationship growing?

It's important to take a step back and take a measured approach to building a program that will put you in good stead in the long run, not just for a few months until the novelty wears off with your executives!

There are several key stages to building a B2B CX strategy. Of course, within each of these stages, there's a lot to think about, but here's what I think provides a good starting point to help guide plans:

#### **Define your program's direction:**

First take stock of your current state of CX maturity. Do you have customer journey maps that are segmented by customer and end-user types to accurately pinpoint moments that matter most to the business? Then, how have you used these maps to anchor your VoC or customer insights program? Have you designed the program to contribute critical data points linked to your company's business outcomes?

#### **Deliver an action-oriented**

**insights program:** Has your insights program been designed for maximum impact? Are your listening posts delivering the quantitative or qualitative information you need on customer behaviors and emotions? What about other operational data – are you pulling that into the system and integrating it? Most of all, are you providing information that those outside the CX or insights teams can understand and act upon?

**Drive results:** You may not own the actions that are needed to change your customers' actual experiences with your brand but are you driving the organization toward the answers? Are you the catalyst, the champion and the leader of your company's CX maturity? Do you fully understand the connection between the insights you deliver and the results your organization is striving for?

B2B customer experience can be challenging for many reasons. There are few universal metrics that apply to B2B's specific market segments, thus benchmarking tends to be most effective against your own internal measures vs. categories too broad for comparison. It's also difficult to gain CX alignment across multiple segments with very different client

bases, yet we see progress being made here with our client base.

As a CX practitioner in B2B and B2C, I know the challenges are real. But the answer lies in driving action in the most effective ways you can, often earning the right to more budget once you have proven ROI models. So, know your weak spots to improve and leverage your strengths – jump in strategically and make it your goal to sponsor and deliver actions that are meaningful to both the company and your customers.

### **Multiple contacts**

People buy from people. What does this mean for the people “on the ground” – the account managers who need the right insight about these multifaceted client relationships in order to succeed? For a start, there is no such thing as a straightforward client relationship. Not only are there multiple contacts within a client account to consider – users, influencers, decision-makers and more – but the story is much the same on the vendor's side too. The main point of contact may be an account manager but there are also operational teams, support and service representatives, supporting sales personnel and more. For those of us who work with global clients, the situation gets even more complex, with multiple account managers looking after the relationship in different countries. This “many-to-many” relationship means that a clear view of the overall health of an account is not easily grasped.

But this can also be an advantage: people buy from people and the front line of your business is bigger. You have more people who have access to the nuanced interactions with your clients and, more importantly, those people have insight and opinions about the prospects for that account. While account directors may have the ultimate responsibility of retaining and growing clients, it's important to remember that the rest of the team will have great insights into the quality of the relationship.

This means that business must incorporate the voice of the employee alongside the voice of the customer by deploying health-check surveys.

These should be made available to all frontline employees who have something to say.

An important element to remember here is that the feedback they provide does not have to be based in metrics or hard facts. Often, a hunch or a gut feel is a vital first sign that all is not well in an account, so allow employees to share that sense through your survey. One person feeling that things are not quite right may be nothing to worry about but if you discover that several people have a similar feeling you have the ability to create an early warning system that the account manager can use to take action.

### **Drive action**

Listening is only the first step, whether you're listening to clients or to team members. The purpose of all that listening is to drive action. To make the right decisions, prioritize effectively and minimize risk.

For the CX practitioner, the focus must be on enabling that action, putting the right tools in the hands of the account managers and helping to build an environment where customer and employee feedback are at the heart of decision-making processes.

Actions come in two forms: tactical and strategic. Tactical actions can be set in motion as an immediate response to a contact's feedback or a changing situation and enable account managers to manage the short-term health of an account to keep things ticking over. Strategic actions are driven by a longer-term view and will probably impact multiple accounts. This makes them critical but often not entirely within the control of individual account managers and so may require wider support.

### **Great opportunity**

When looking at the short-term steps that companies can take, remember this it isn't all firefighting and troubleshooting. When clients are happy, this is a great opportunity to cross-sell, secure recommendations into other areas of their business or even recruit them into an advocate program. It's also a good opportunity to engage and recognize the wider teams who are responsible for keeping clients happy, helping to embed a

client-centric ethos into the business.

In most cases, account managers will be accountable for coordinating specific actions in response to their clients' feedback but they will have to engage with the different functions to resolve the challenges raised. Ultimately, it's about making many small changes within an account as a result of listening to the right people at the right time. This sounds simple enough but when an account manager has a dozen or so accounts, each of which have five or more contacts, then keeping on top of what needs to be done is a challenge. E-mail alerts that flag low scores or negative comments are great but there's a danger of getting buried and either not focusing on the right thing or failing to act at all.

Live dashboards that provide insight into the overall health of an account manager's portfolio can be set up to show all the cases requiring action in a single environment. It may be the same number of cases as with individual e-mails but it's a lot more manageable. Equally important is the ability to track what action

was actually taken – something that can be easily be forgotten in a flurry of activity but which is critical to understanding which actions are effective and which are not.

### Clear understanding

For account managers, long-term success means a clear understanding of their entire portfolio and its performance now. This requires a holistic view that takes into account all their clients, as well as a clear indication of the health of individual relationships.

This is where bringing together data from multiple sources around the business is vital. Metrics such as Net Promoter Score or customer effort are great but this needs to be viewed through the lens of revenue. More specifically, at-risk revenue. Bringing in financial data to a portfolio-reporting dashboard enables account managers to identify the most critical issues effectively and reduces the chance of a squeaky wheel receiving more focus than business value would justify.

A high-level view like this also makes it easier to identify what the underlying causes of problems are and can help tie a revenue figure to the risk of not dealing with a particular problem. This is vital in situations where implementing a resolution to that problem is above the pay grade of an account manager and will need involvement from people at a more senior level.

Fundamentally, people buy from people and it is the role of a good CX team to give account managers in B2B enterprises the tools they need to work effectively to meet the needs of their clients in the short and long term. Simply firing out alert e-mails to say a particular contact at a client is unhappy is not enough. Context is vital and can make a huge difference in achieving buy-in from potentially cynical sales teams who feel they have enough to handle already.

# Not another byte

How to use curation to manage the onslaught of data

| By Robyn Clayton

## snapshot

Robyn Clayton outlines how researchers can resolve to get infobesity under control in 2019.

Resolutions are all the rage at the start of a new year. We invest a great deal of time and effort deciding which resolutions to make and the strategies we are going to use to stick to them. We even invest money to help make them happen. And not surprisingly, following a holiday season often marked by too much of too many good things, many of us focus on slimming down. Year after year after year weight loss tops the resolution list. And 2019 is no different: Ipsos data shows 50 percent of Americans plan to lose weight this year.

At Ipsos, we believe that businesses should also consider a resolution to slim down – and not in the usual places like staffing and resources. Instead they should consider solving the large and ever-growing problem of infobesity. In this article, we will explore infobesity, how curation can help cure it and why and how to get started.

Infobesity (also known as information overload, infoxication and information explosion) is a term used to describe how difficult it is to understand an issue and make decisions effectively when one has too much information.

Just how big of a problem is infobesity? One of the first people to analyze the growth of knowledge was inventor and futurist Buckminster Fuller. In his book *Critical Path*, he estimated before the 20th century, information was doubling approximately every century. In the mid-1900s, that speed increased significantly, with information doubling every 25 years or so. By the turn of the 21st century, the time it took to double information was reduced to one to two years.

IBM predicts that by 2020, knowledge will double every 11 to 12 hours.

But it's not just the increasing speed of data that is feeding the infobesity epidemic. This explosion in the amount of information available is also being exacerbated by major changes in the data and business worlds. Data has moved from clean and structured to messy and unstructured. It now includes user-generated content, new and different formats and changes in both syntax and meaning. At the same time, businesses need to accelerate the

# Telephone Sampling Reinvigorated

Looking for more productivity out of your telephone sampling? STS is your answer. With 30 years of experience in creating accurate, representative, and productive sample, the sampling experts at Scientific Telephone Samples will help make your telephone data collection a success.

STS offers scientifically constructed RDD landline and wireless samples, targeted wireless samples, called Enhanced- Wireless™, listed landline sample, ABS, registered voter, B2B, as well as address and phone matching services. Our industry first Enhanced-Wireless™ targeted cell phone sample is targetable by hundreds of different variables, including age, income, gender, ethnicity, children, census block group, radius, polygons, and many more. STS also offers a complete array of advanced GIS based sampling techniques that are extremely useful for targeting small geographic areas, or defining custom sampling frames. To pinpoint hard to reach respondents, combine techniques such as PRIZM targeting and household level FPL (Federal Poverty Level) targeting and maximize hit rates.

At STS we are full-service. The STS experts will provide demographic analysis, offer consultation regarding sampling methodology and the number of records required, and will help you choose the right sample to meet your research objectives. Contact STS today and find out how STS can reduce your telephone data collection costs and reinvigorate your telephone research.

**Start being more efficient with STS.**

**STS**  
SCIENTIFIC  
TELEPHONE  
SAMPLES

speed and agility with which they respond to an endless array of new challenges. Companies are finding their categories more competitive than ever before, with new competitors as barriers to entry lower. The landscape of influence has changed, shifting from institutions to individuals. Consumers are more demanding as well; they want personalized products that meet their individual needs and they want them on their terms. Corporate researchers are trying to address all of these demands, often with fewer resources and dwindling budgets.

Infobesity is the result of a perfect storm that manifests itself through a variety of symptoms, including:

- silos where different categories or markets don't share insights;
- researchers spending too much of their extremely limited time wading through data trying to get to an answer that may or may not exist in a useful format;
- difficulty connecting the dots across data sources/projects, often resulting in the same research being done multiple times and adding needless time and budget to projects.

All of which adds to a glut of new reports/results in an already overloaded system, contributing to the infobesity epidemic.

### **Solution is curation**

So how do you solve a problem like infobesity? Old solutions based only on primary research can no longer address the need for speed, agility and impact. At our firm, we believe that today's world requires companies move up the knowledge hierarchy by transforming their existing data into insight and effectively using this insight to make decisions and create business impact. This new challenge demands a new solution. And that solution is curation.

At its core, curation is about creating clarity and making the right

## **At its core, curation is about creating clarity and making the right insights available to the right person at the right time to enable positive, sustainable business impact.**

insights available to the right person at the right time to enable positive, sustainable business impact. It focuses on primarily utilizing, paring down and transforming existing – and often disparate – data types and sources to help answer key business challenges and questions quickly and directly with actionable strategies for key audiences.

There are three key steps to this transformation:

### **Focus less on collecting data, more on connecting insight.**

There's a fundamental shift from this disruption that means that collecting data needs to be less of a focus. There is already a ton of data easily available, so the data itself becomes entry stakes. Data and research are still important but they are not nearly enough. Now it is about integrating multiple data sets to uncover insights and tensions.

### **Use the lens of the business and consumer to build potential strategy and action scenarios.**

Researchers cannot stop at insights; insights are the means but not the end. Researchers need to take it to the next level to build potential strategy and scenarios. This requires a consumer-centric lens to put the insight into sharper focus, followed by the business, brand and category lenses to ensure the indicated actions address the original business need.

**Share in a way that stakeholders can easily consume and create impact.** At the end of the day, the insights job is about impacting

business decisions.

Therefore, the curation job doesn't stop at the insight and recommendation. It not only has to matter, it has to be memorable and actionable. This involves using rich storytelling and multimedia assets such as images and videos comprising consumer-centric, insight-based stories that resonate. It is critical to identify stakeholders, their business priorities and how they plan, activate and strategize.

So, who does the curation? Where the responsibility for curation resides can depend on your organization's structure. It is often a key function of research or insights departments and/or knowledge management teams. The need is often greatest for those with responsibilities that span markets, categories or brands. But even in a single-region, single-brand role, there can still be a ton of information to manage. Curation can be done in-house or on the supplier side. With increasing time pressures and resource constraints, many on the client side are looking to suppliers to provide both capacity help and additional tools and expertise. Others bring in a supplier to provide an external lens on their data and information.

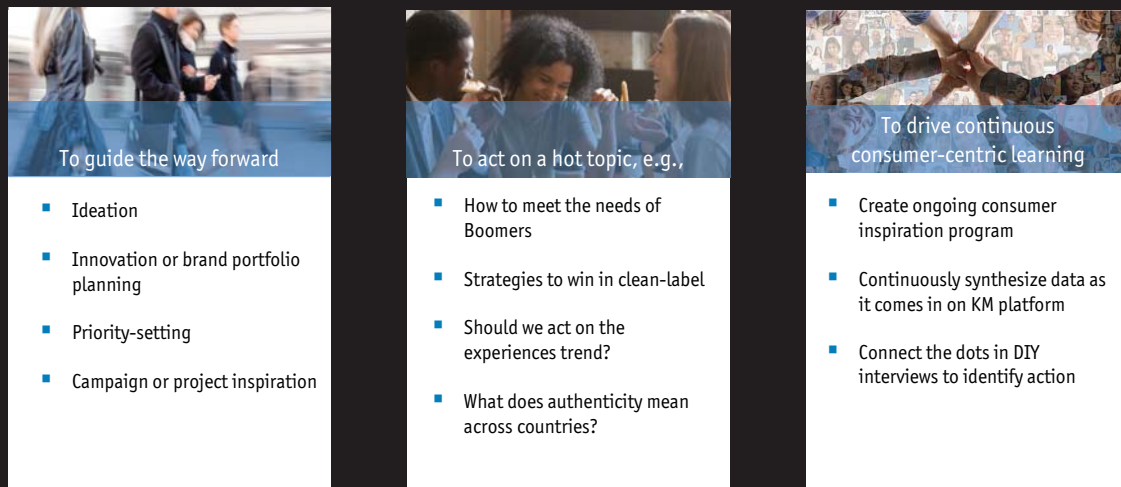

### **Myriad benefits**

Just as weight loss is something most of us contemplate from time to time on different scales and scopes, curation is also something that businesses of all sizes and shapes should consider. The scope of curation can range from smaller one-off projects to ongoing programs and from small to large budgets. Just as weight loss comes with myriad benefits so too does curation.

To keep the metaphor going, just as exercise helps transform fat into muscle, curation helps transform and elevate data into more effective actionable insights. This means a stronger return on research spend, because existing data, research and

Figure 1

## When to Curate: Sample Triggers and Objectives

insights are reused and put into action.

In the same way losing weight can make a person faster, curation can drive speed and agility. Curation enables you to start a step ahead by understanding what you already know. It gives you an on-demand arsenal to address future questions, course-correct and anticipate market triggers. With the luxury of time gone, curation focuses on making businesses always-ready and future-ready.

Weight loss is not just about immediate gratification but also about health and long-term wellness. Similarly, in the struggle against infobesity, curation can help an organization drive an ongoing learning culture by making insights memorable, digestible and at the forefront of decision-makers' minds.

### Specific trigger moments

While many may contemplate weight loss at the start of the year, people are more likely to undertake the necessary actions if they have a specific need in mind: looking good for a wedding; attending a reunion with people they want to impress; vacations; health scares, etc. Curation too has specific trigger moments of high need and high reward that can

help motivate you to start to address your infobesity issues (Figure 1).

Just like a big goal such as weight loss can be daunting, so can the idea of transforming the vast array of organizational data and knowledge into actionable insights. We find it's best to start by identifying an easy first project, such as curating knowledge to determine how to better meet the needs of a particular demographic group. Small actions are often easier to commit to and maintain – and can lead to big results.

A customized approach is also key to both weight loss and curation. No one answer is right for everyone, as what works best depends on the individual's challenges and needs. We believe each curation study should also be tailored to the client's specific needs, challenges and audiences. We utilize a proprietary framework for curation but the inputs and outputs are always driven by the particular needs of the client. In some cases, we may supplement client information with our syndicated learnings and resources when needed. Outputs range from infographics to videos and podcasts to microsites developed on our client's existing knowledge platforms or our own platform. Just

as tailoring your approach to exercise increases the likelihood you will see results, tailoring curation also increases the value and actionability of the final results.

When undertaking a weight-loss plan, expert advice can be critical. Often people employ doctors and personal trainers to help ensure success. At Ipsos, we find that curation also requires a team approach. A key first step taken by our curators is to build a multidisciplinary support system that taps our collective expertise to ensure success. That support system may include a behavioral scientist or a semiotician or a trends expert. Listening and AI are also tools that can be utilized when curating.

At this point in the year, chances are your initial resolutions have fallen by the wayside. But there is nothing that says you can't replace your previous resolutions with a new one. Consider curation and help make a dent in the infobesity epidemic. 

Robyn Clayton is a director in Ipsos' qualitative practice, based in Cincinnati. She can be reached at [robyn.clayton@ipsos.com](mailto:robyn.clayton@ipsos.com). This article was aided by additional research from Emma Grand, global product manager.

# We can do better

Core reasons why top-box is not an ideal measure for marketers and researchers

| By Ken Faro and Elie Ohana

## snapshot

Part two of a two-part article looks at the statistical arguments against relying on top-box scoring.

In part one of this article last month, our argument against the general use of top-box scoring was mainly conceptual. After all, we believe this emphasis to be important since research is a conceptual endeavor. The bulk of research is based on rigorous conceptualization of the problem being studied and the method used to best assess the problem. The rigorous conceptualization required in research also includes the statistics chosen to best test the problem being studied. For example, it is important that the measures used in research align with the conceptualization of the problem in the study. Failure to align constructs and measurements could easily invalidate one's study. For a more detailed treatment on the importance of designing conceptually rigorous and valid measures, see our article: <https://bit.ly/2s9woWR>. In the context of the current article, there are a number of reasons as to why, statistically speaking, using averages is better aligned with what we're testing than using top-box scoring. This is the case for two core reasons and five secondary reasons:

1. Different performances on statistical testing
2. Loss of information (loss of power; loss of effect size; loss of variance explained; loss of non-linearity; loss of visual information)

The authors assessed each of the reasons by performing 1) a simulated data set created to approximately match the distributions in part one's Sample 1 example (see Table 1, 2 and 3 in part one); and 2) a real data set from a survey fielded approximately one year ago. We will show how both the simulated and the real data provide striking results that support our position.

### Different performances

The first statistical reason to question top-box scoring versus using averages is the

# INTRODUCING THE MARKETING RESEARCH EDUCATION FOUNDATION

Our mission: To unify, inspire and activate the marketing research community to focus its collective resources to educate children and youth worldwide.

**GET INVOLVED. GIVE BACK.**

[www.MRGivesBack.org](http://www.MRGivesBack.org)

fact that they perform differently. Let's again use the Sample 1 data in Table 1, 2 and 3 from part one. When testing for differences in the proportion of top-box scores, the z-test for two independent sample proportions yields a z-score of -4.45, which has a p-value of <.001. It's significant! However, when using the full Likert scale, the independent samples t-test yields a p-value of .11 – not significant. So now what do you do? How do you interpret two tests which are often used as proxies of one another, knowing that one might flag significance while the other one might not?

The reverse of Sample 1 can also happen. Imagine we conducted a survey with 100 respondents per ad and the data set that comes back has the distribution shown in Table 4.

Table 4: Sample Respondent Data

Respondents	Ad A	Ad B
1	7	1
2	7	1
3	7	1
4	7	3
5	6	4
6	6	7
7	5	7
8	5	7
9	5	7
10	4	7

When testing the top-box score, the difference between two independent proportions yields a z-score of -1.4, which has a p-value of .16 – not significant. However, when testing the full scale, the independent samples t-test comes back as significant – a p-value less than .001. Again, what do we as researchers do in this case?

**Simulated studies:** To some, the above two examples might seem too artificial – contrived examples to make the authors' points. To illustrate that this is not the case, we put our claims to the test in a simulation study. In this study, we simulated data for respondents who, for the purposes of this article, were presumably answering the extent to which they liked the ad

Table 5: Sample 2 Likert Scale Distribution

	Dislike it – 1	2	3	4	5	6	7 – Like it
Ad A	0%	0%	0%	10%	30%	20%	40%
Ad B	30%	0%	10%	10%	0%	0%	50%

Table 6: Sample 2 Mean and Standard Deviation

	Mean	SD
Ad A	5.9	1.05
Ad B	4.5	2.67

they saw. To do this, we created two normal random variables, one to represent respondents' ratings of Ad 1 and one to represent respondents' ratings of Ad 2. To simulate our examples, each variable was distributed around the Sample 1 means highlighted in Table 3. However, to make our simulation closer to real data, we injected noise into the distribution. We accomplished this by setting the mean and standard deviation for each simulation to a random number within +/- .5 units of our Sample 1 data (e.g., for Ad 1, mean = 4.5-5.5 and SD = 1.06-2.06). Additionally, to capture the behavior of the test as a function of sample size, we varied the sample size (i.e., 100, 200, 300, 500 and 1,000). With all of these considerations, we were able to estimate the percent of times that top-box scoring and Likert-scale scoring showed the same results.

When it comes to smaller sample sizes, such as when N = 100, top-box scoring and Likert-scale scoring yield completely different results. For example, out of 1,000 simulations, a t-test finds 538 of the studies to have a significant difference. Conversely, when using top-box scoring, only 125 out of the 1,000 studies were found to have significant differences. In total, only 14 studies (1.4 percent of total simulated studies) found overlap between the two tests. If only 1.4 percent of 1,000 studies have overlap between the two tests, it seems fair to assume that the tests perform very differently.

Even when we increase the sample size to 1,000 respondents, we find a similar – albeit less extreme – pattern. Again, simulating 1,000 different studies, 845 were found to be statistically significant when testing for top-box scores. All 1,000 studies

were found to be significant when testing for a difference in the averages. This means that out of 100 percent of the studies deemed statistically significant by the top-box score, the t-test was also significant. However, the reverse is not true: 16 percent of the studies that were significant when using a t-test were NOT significant via the top-box scoring.

**Real data:** But simulated data is just that – simulated. And those who are familiar with the many pitfalls of real-world data sets know all too well that some data sets can create havoc among otherwise neatly known statistical principles. To examine the ecological validity of these findings, we sought to replicate them with a real-world creative testing data set.

Additionally, the authors believed that a stronger argument could be made if we were to test the performance of averages and top-box scoring on more than one item. Testing on multiple items would demonstrate that the pattern we observed was not just a function of an idiosyncratic fluke in one item but rather an established pattern across multiple items.

The data set used for this analysis was collected in Q4 2017 and was used when testing creative for a pitch. There were two pieces of creative used for this analysis. After exposure, respondents had to answer questions in two main sections: ad assessment (e.g., Overall, how did you like the ad? Was it memorable?) and consumption outcomes (e.g., After seeing the ad, how likely are you to visit the Web site? The store?). We numbered all of the items in these sections and used a random-number generator to select the outcomes for this article. The items selected are:

- How much do you agree or disagree with the following statement about what you just saw?
  - It grabbed my attention.
  - I think it was unique.
- After what you just saw, to what extent would you consider

Table 7: Percent of Significant Studies Without Significance Of The Other Test

Sim=1,000	N				
	100	200	300	500	1,000
Prop z-Test	11%	9%	5%	0%	0%
t-Test	52%	69%	64%	45%	16%

working for each of the following companies?

- After what you just saw, to what extent would you recommend to a friend or colleague that they should work for each of the following companies?

We then conducted statistical tests to explore differences between responses for the two creatives across the questions. To make the analysis comparable to the simulation, we bootstrapped the results by resampling 1,000 times. Bootstrapping involves conducting an analysis multiple times in order to obtain more precise estimates. The results of our analysis can be found in Tables 8-11.

We observe a very similar

Table 8: Percent of Studies That Have Significance Without Significance of the Other Test. Item: "It grabbed my attention."

S=1,000	N				
	100	200	300	500	1,000

Table 11: Percent of Studies That Have Significance Without Significance of the Other Test. Item: "To what extent would you recommend to a friend or colleague that they should work for each of the following companies?"

S=1,000	N				
	100	200	300	500	1,000
Prop z-Test	1%	0%	0%	0%	0%
t-Test	32%	6%	0%	0%	0%

trend. At lower sample sizes, a smaller proportion of cases (0-1 percent) found top-box scores to be significantly different when the t-test was NOT significant. However, 31-34 percent of the tests that the t-test found significant were not found to be significant by the top-box scoring statistic. Again, this suggests that each statistic performs very differently. It is only when sample size increases dramatically that this trend disappears as all comparisons for both tests are flagged as significant.

The bottom line: When sample size is small, each test performs differently. Generally speaking, a t-test identifies more differences than the z-test used for top-box scoring.

## Loss of information

The second major statistical reason for not using top-box scoring is that market researchers who use that statistic are intentionally throwing away information. They are taking a scale, which in the above example has seven potential pieces of information (seven points on the Likert scale) and reducing it to two points – top-box and not-top-box. That means they are intentionally throwing away five pieces of information. Throwing away information leads to several different effects. Most important are the effects on five key areas: power, effect size, variance explained, non-linearity and visual information. Below, we provide a detailed analysis of each effect.

**Loss of power:** Every statistical test is like a market researcher's microscope. You need a more powerful microscope to see smaller things and a less powerful one when looking for bigger things. This analogy holds in statistics – you need more power to detect small differences and less power if you're looking at bigger differences. Power is a way of expressing the probability that the researcher will find a significant difference that is real (as opposed to a false negative or not finding a statistical difference when there really is one). Because ensuring that we have sufficient power is central to achieving a good study design, we recorded power in each of our simulated studies discussed above (see Table 12).

Notice that in both cases of low sample size and high sample size, the power is always higher for the t-test, not for the test used on top-box scoring. In fact, at the lower sample sizes, the power of a test for top-box is approximately half of the size of its t-test counterpart.

We similarly replicated the effects of using top-box scoring on statistical power within our real-world data set. This data set did not reveal the difference of the same magnitude as the simulated data set. However, the pattern still holds – in all cases, a t-test has equal or more power than the z-test used for top-box scoring.

To help frame this differently, let

Table 12: Statistical Power in Simulated Studies

Sim=1,000	N				
	100	200	300	500	1,000
Power z-test	0.25	0.35	0.43	0.56	0.79
Power t-test	0.53	0.76	0.88	0.97	1

Table 13: Statistical Power. Item: "It grabbed my attention."

S=1,000	N				
	100	200	300	500	1,000
Prop z-Test	0.64	0.88	0.96	1	1
t-Test	0.88	0.99	1	1	1

Table 14: Statistical Power. Item: "I think it was unique."

S=1,000	N				
	100	200	300	500	1,000
Prop z-Test	0.64	0.87	0.96	1	1
t-Test	0.88	0.99	1	1	1

Table 15: Statistical Power. Item: "To what extent would you consider working for each of the following companies?"

S=1,000	N				
	100	200	300	500	1,000
Prop z-Test	0.65	0.87	0.96	1	1
t-Test	0.88	0.99	1	1	1

Table 16: Statistical Power. Item: "To what extent would you recommend to a friend or colleague that they should work for each of the following companies?"

S=1,000	N				
	100	200	300	500	1,000
Prop z-Test	0.64	0.87	0.96	1	1
t-Test	0.88	0.99	1	1	1

us specifically look at the results of power when N=100 in Tables 13-16. Across the board, the test for top-box

scoring has a power of 0.64 - 0.65 relative to the t-test, which has a power of 0.88. To put these results

in perspective, using top-box scoring (where N = 100) leads to a similar loss of power as running a t-test on a sample of 57.

The difference in power between the t-test and the z-test may be explained by looking at what affects power. This includes:

- sample size – the more sample, the more power you have;
- alpha – the smaller significance criterion, the more power you need;
- effect size – the smaller the effect size, the more power you need.

In our simulations and real data sets, sample size remained consistent (matching conditions when N = 100-1,000) as did the alpha (at .05). However, for a given sample size, the effect size was reportedly smaller in the tests using top-box scoring, something we will demonstrate next.

**Loss of effect size:** One of the reasons both tests yield different outcomes (i.e., presence or absence of a significant result) is because the effect we're testing differs. Effect size is a statistical measure that assesses the practical significance (not statistical significance) of a test – namely, how big of an effect does one thing have on another. To see how effect size differed between top-box scoring and averages, we recorded the effect sizes from our simulation studies (see Table 17).

Notice that once again, we observe a similar pattern. In all cases, the effect size measured by the t-test is higher and twice the size as the effect size of the z-test used for top-box scoring. This means we are "dampening" the measurement of the effect of seeing an ad on key performance indicator. It's not advantageous for us to use a statistic that dampens the effects because then once again, we have an artificial read on how ads are doing.

To confirm that this pattern is generalizable, we also examined the differences in effect size between measurement methods using our real-world data set (see Tables 18, 19, 20 and 21).

Again, the effect sizes for t-tests are almost twice as big as

	Measure 4: Recommend	.33	.16	17%

the effect sizes for top-box scoring. For advertisers, this means that by choosing top-box scoring, we are artificially DEFLATING the measure of the effect our ads have on consumers. Ultimately, what is the

point of testing our ads if we are not going to properly test the effect they have on key performance indicators and behavioral activations?

**Loss of variance explained:**  
Very similar to the way in which

we're dampening the measurement of how our ads affect consumers, by using top-box scoring we also are losing considerable information when using variables like how much a respondent likes an ad to explain behavioral activations, such as visiting the store's Web site. Oftentimes, we use r-squared as a measure of how much variance the x variable explains in the y variable. The authors set out to simulate what one might find when using r-squared with a predictor variable coded as either continuous or top-box. To do this, the authors took the original variable (see Tables 1, 2 and 3) and created a second variable which was correlated to the first. We then varied the strength of the correlation. Notice how in the simulations below, as the correlation gets stronger, the r-squared values grow further apart. The pattern suggests that by using top-box scoring, we are explaining half as much variance than using the original continuous variable.

We replicated a similar finding within the real data set as well. While we did not manipulate the real data to vary the correlations between the predictor and outcome variables, overall, we observe the same trend – top-box scoring only explains about half as much variance in comparison to when the overall Likert scale is used.

**Loss of visual inspection:** If you are less inclined to accept the case we've made for our position with statistics and simulations, let the graphs speak for themselves. We can understand this loss of information intuitively through scatterplots. Plot 1 illustrates a scatterplot of the simulated data from the last section. Specifically, this first graph plots both the x-axis and y-axis in their original form – as Likert scales.

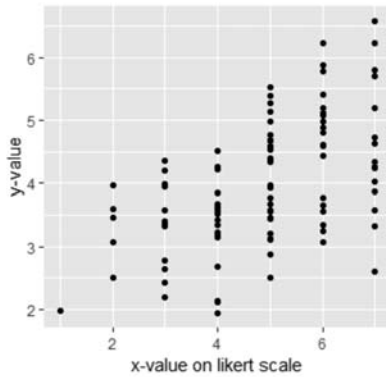

Even to the untrained eye, this graph shows a clear relationship – higher values on the x-axis are associated with higher values on the y-axis. This intuitive understanding of the data is lost if we were to use top-box scoring. For example, take a look at Plot 2. This plot has the same exact data but with the x-axis recoded using top-box scoring.

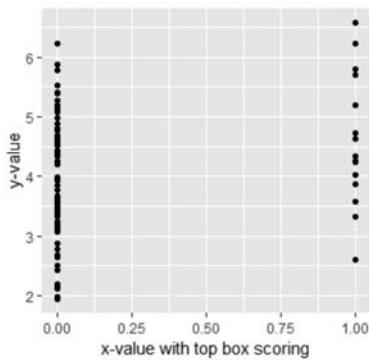

It is not impossible to see a trend here but it's certainly much harder – and less intuitive. Top-box scoring takes the data along with all its variability and collapses it on top of itself. So visually, we often go from clear trends that are observed as variability across a range of values to vertical lines.

This doesn't just make the graph harder to understand, it also dampens trend line. Consider Plots 3 and

Plot 1: Simulated Data in Scatterplot With X-Axis on a Likert Scale

Plot 2: Simulated Data in Scatterplot Recoded With X-Axis Using Top-Box Scoring

4. Plot 3 shows the simulated data shown above (in Plot 1) but this time with the trend line overlaid. Similarly, Plot 4 shows the same exact data as Plot 2 along with a trend line.

The first thing you might notice: the line in Plot 3 shows a more distinct trend than Plot 4. In fact, the pattern in Plot 4 seems to have moved closer to a horizontal line, which would indicate no trend.

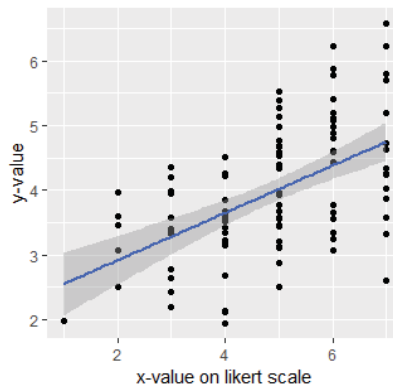

When we turned to the real data set to replicate this finding, we saw a similar effect. Plot 5 shows a clear strong positive relationship when all the scale information is used. However, in Plot 6, that relationship is weakened as the trend line once

again becomes more horizontal.

Whether we choose to look at the effects found in the simulation or the effect in the real data set, once again, we see that the measures perform differently.

**Loss of non-linearity:** Looking at statistical relationships in scatterplots is valuable. For example, the data doesn't always show neat linear relationships. Nonetheless, we often simply assume a linear relationship and carry on with our analysis.

Plot 3: Plot 1 With Trend Line

Plot 4: Plot 2 With Trend Line

Plot 5: Real Data With Trend Line

Plot 6: Real Data With Top-Box and Trend Line

While many market researchers execute their statistics under the assumption of linearly related variables, it is possible that non-linear relationships exist.

For example, Plot 7 shows a cubic relationship between how much consumers liked an ad and their willingness to engage in specific behaviors (such as visiting the brand's Web site). What we see is that both for low and high ad-liking

score, an increase in one point of ad-liking sharply increases how willing someone is to engage in our target consumption behaviors. However, in the "middle" of the ad-liking score, an increase in one point of ad-liking is associated with a small incremental increase in how willing someone is to engage in our consumption behaviors.

Using top-box would not pick up on this trend. Instead, it would assume no trend at all. Again, this

visual example illustrates the details we throw away when we settle for top-box scoring.

### Other work should be done

It should be clear by this point that there are a number of different reasons as to why market researchers might not want to use top-box scoring. For both conceptual (see part one) and statistical reasons, it should not be used as a general

Plot 7: Cubic Line as Line of Best Fit Given Data

practice, except for specific cases when counting people who are high on a measure is of direct relevance to the goals of the research. However, both authors would like to emphasize that this article bases its conclusions on only one simulation study and one real data set. Therefore, our conclusions should not be accepted

as true in all cases. Other work should be done to examine if the observations made in this article replicate on other data sets. Only through replication can we as a discipline feel confident in the claims made in this article.

Hence why the objective of this article is not to say top-box scoring

is always bad and should never be done. Instead, the goal of this article is merely to suggest a healthy sense of skepticism of a measure that is widely used within the applied field. Furthermore, because of the drawbacks of using top-box scores outlined in this article, we hope to encourage researchers to think carefully about the variables in their study and how they are choosing to measure them. How we choose to measure variables has a profound effect throughout our research. Choosing measures poorly leads to obtaining results with questionable validity. No client wants to make a business decision based on results that were poorly conceptualized and measured. So the next time you go to use top-box scores, ask yourself if you have the right study for that measure. 📌

# 12 TOP NON-CONSCIOUS RESEARCH COMPANIES

Non-conscious research is a valuable way for researchers to gain a deep understanding of consumers' behaviors and thoughts. If you're looking for targeted, in-depth insights from consumers, this type of research may be beneficial to you.

Non-conscious research providers can offer many different but effective ways to find out what consumers are truly thinking and feeling. Whether you are seeking insights for your product or service, in search of an inside look at consumer behavior or developing strategies to grow your business, these companies can provide all of the necessary channels to gain in-depth feedback using cutting-edge methods and technologies like eye-tracking, neuroscience, virtual reality and more. Whatever methods are used, these companies can help you go beyond what consumers say and gain detailed feedback on true consumer sentiment. To find out how non-conscious research can benefit your research project, consider these companies.

## Beall Research

Founded 2003 | 12 employees  
Anne E. Beall, Ph.D., CEO

Beall Research is a strategic market research firm in Chicago that conducts qualitative and quantitative research for major consulting firms and Fortune 500 companies. Their work is used to make major business decisions such as investing in companies, launching new products/services and creating persuasive communications. What differentiates them is their psychologically-inspired

### CMI

Founded 1989 | 25 employees  
Chet Zalesky, CEO

As a full-service insights and research consulting firm focused in behavioral sciences, CMI provides valuable information

based on the evolved principles of non-conscious research. We enable organizations to identify and understand the non-conscious habits driving customer choice to build effective marketing and messaging strategies that disrupt existing habits and influence brand choice. Clients trust our tried-and-true strategies as we convert complicated business questions into actionable answers using proprietary non-conscious research methodologies such as yChoose™, yPrescribe™ and yQuote™. Our solutions help organizations develop a differentiated brand strategy by understanding how customers make decisions, why they make those decisions and what we can do to influence future behavior.

### BIOPAC Systems Inc.

Founded 1985 | 60 employees  
Frazer Findlay, CEO

Measure consumer emotion with innovative solutions from BIOPAC. BIOPAC provides the hardware and software tools market researchers, neuromarketing researchers and consumer neuroscientists use when collecting and analyzing non-conscious

data. To better understand decision-making, marketers and researchers are embracing neuroscience techniques such as eye-tracking, facial coding, stimulus presentation, virtual reality systems, synchronized subject video, fNIR optical brain imaging and biometrics including EEG, EDA, ECG and more. Study types: behavior, consumer emotion, consumer neuroscience, neuroeconomics, human experience, neuromarketing, product design, packaging and pricing, advertising, store design. Fully integrated wired or wireless data collection and analysis systems are available. Ninety-nine percent of the world's Top 100 universities use BIOPAC Systems for scientific discovery. Fortune 500 companies use BIOPAC Systems for neuromarketing and consumer neuroscience insights.

## Emotive Analytics

Founded 2004 | 4 employees-associates  
Paul Conner, Founder and CEO

Emotive Analytics is a consumer research company that assesses the emotional dynamics of consumer behavior, including those that are “implicit” or “System 1” – i.e., automatic, uncontrollable and often non-conscious. Founded in 2004 by Paul Conner (a 35+ year research veteran), we use a myriad of approaches, all founded in behavioral science. Qualitatively, we adapt from clinical psychology. Quantitatively, we adapt from social/cognitive psychology and neuroscience. We specialize in implicit measurement with our IE Pro Technology. This includes IE PRO YOU®, our online platform for conducting implicit association studies. Our studies support many business applications including branding, advertising, product development and sensory testing.

## EyeSee

Founded 2012 | 82 employees  
Olivier Tilleuil, CEO

EyeSee is one of the most innovative behavioral insights companies in the world. We combine conventional with remote behavioral methods such as online eye-tracking, facial coding, virtual shopping, etc., to unlock next-level insights for shopper marketing, advertising, e-commerce and innovation. Respondents use their own devices and Webcams, saving time, costs and enabling testing on a global scale. Our teams are based in New York, Ghent, Paris and Belgrade and conduct studies in more than 40 countries. We work with global brands in a myriad of industries, such as Johnson & Johnson, Twitter, Microsoft, Viacom, Nestlé and many others.

Phone 646-547-1449

## Forte Research Group

Founded 2010 | 35 employees  
Elizabeth Plotkin, VP Insights

Forte Research Group is a full-service insights and strategy consultancy that combines expertly crafted questioning with neuroscientific and psychological data to uncover the complete story. Eye-tracking provides the exact elements viewed, while biometrics and facial coding uncover that which consumers often do not articulate. These visceral insights provide deeper understanding of consumer behavior. In-store, at home or in a research lab, capabilities encompass: message/creative development, advertising effectiveness, QSR/shopper experience, benchmarking/tracking, customer satisfaction and package testing. Comprised of an experienced staff, Forte Research Group provides research solutions throughout North and South America, Europe and Asia.

### HCD Research®

Founded 1991 | 20 employees  
Glenn Kessler, CEO

HCD Research® is a marketing and consumer sciences company that provides expert recommendations by employing traditional and applied consumer neuroscience

to optimize the design of market research projects for our clients. We are “methodologically agnostic” and approach each client inquiry as a unique challenge. Our customized solutions employ the most appropriate research tools based on your specific objectives. These tools can include traditional research, psychophysiological measures, psychological testing or a synergistic combination of these methods. With no technology bias, we can optimize the designs of research projects by only using the most appropriate tools based on your needs.

### Informed Decisions Group Inc.

Founded 2004 | 13 employees  
Colin Valdiserri, CEO

Informed Decisions Group Inc. is a full-service behavioral insights firm specializing in shopper insights, visual sciences and virtual solutions. IDG leverages

mobile eye-tracking while combining visual insights with behavioral and biometric data. Our methods have innovated shelf testing, package and menu board optimization for 15 years. Our life-sized touch-interactive 3-D virtual aisle captures basket and behavioral data while being portable to anywhere in the world. This enables IDG to leverage our solutions in any location and affords our clients the ability to measure visual and emotional behavior in any market or scenario. IDG measures real-world behavior for real-world insights.

### Interactive Video Productions (IVP)

Founded 1996 | 5 full-time, many contract employees across the globe  
Bob Granito, President

### Emotional Measures for Enhanced Insights

Interactive Video Productions (IVP) offers accessible, smartly-packaged labs for researchers wanting to adopt innovative solutions with ease and confidence. Our portable MobiLAB™ research labs include usability, eye-tracking, neuroscience and biometrics technologies, accompanied by a full-time, experienced and client-friendly system operator who works with you to deliver key research data captured and presented clearly and professionally for your client. In facility, online or in the field, whether you wish to precisely measure Web or product usability or whether you wish to go beyond conscious self-report to include emotional measures, our labs are designed to help you to meet the growing challenges of testing products and collecting actionable data in an ever more complex, consumer-driven world.

## Research Industry News

### News notes

■ London-based insight agency **Vision One** has achieved certification of ISO 20252:2012 quality standard. The independent assessment was conducted by QMS International, an international certification body. The company has also received the Cyber Essentials accreditation by the National Cyber Security Centre.

### Acquisitions/transactions

■ **Directions Research Inc.** has acquired insights consultancy **SEEK**. Together the companies will provide clients with a fully integrated multi-approach solution. Tim Urmston, founder of SEEK, will continue as its president. SEEK's offices will be located within Directions' headquarters in Cincinnati and will operate as an independent division of Directions.

■ London-based research company **YouGov** has acquired **Portent.IO**, a Santa Monica, Calif., marketing analytics platform for the entertainment industry. Portent.IO will rebrand as YouGov Signal and will provide social monitoring and data science analytics tools to complement its existing data offerings and survey capabilities.

■ **Alira Health**, a Framingham, Mass., health care and life sciences advisory

firm, has acquired data science company **Clinical Insights**. The acquisition will add data to each of Alira Health's practice areas, including innovation, regulatory, clinical, strategy and transaction advisory services.

### Alliances/strategic partnerships

■ Plano, Texas, company **Research Now SSI** has partnered with TV ad measurement and attribution analytics company **iSpot.tv** to help brands better understand advertising efficacy. iSpot's experience and scale in TV ad analytics will combine with Research Now SSI's single-source data set to create a TV viewership panel in the U.S.

■ Machine learning and artificial intelligence company **Lexalytics**, Boston, is partnering with architects from **Gensler's** Los Angeles Aviation and Transportation Studio to use sentiment analysis to inform the planning and design of airports. Gensler and Lexalytics will mine social media data from American airports to create an understanding of what travelers and staff value in their airport experience.

### Association/organization news

■ As reported by the **Insights Association, the Federal Communications Commission (FCC)** has approved rules to establish a centralized database of reassigned cell phone numbers, saying it is the best way for voice service providers to notify dialers and "aggregators" (telephone sample providers) about reassigned numbers, allowing dialers to more easily avoid reaching the wrong customers and consumers. The rules also include a safe harbor for accessors of the list against liability for errors in the database. The association says it has supported the establishment of such a database through formal filings and meetings with staff of FCC Chairman Ajit Pai and other commissioners.

### Awards/rankings

■ **QRCA**, St. Paul, Minn., has announced the winners of the 2019 Young Professionals Grant: Vidhika Bansal, UX research and strategy lead, CARFAX; Katy Carew, research manager, KNow Research; Kari Casciano, founder, Elevate Insights; Kelly Donohue, design researcher, Credit Karma; Annette Esquibel, design and UX researcher, The Brightly Co.; Saransh Gupta, user experience researcher, Department of Work and Pensions; Molly Hagan, qualitative associate, Corona Insights; Jack Fleming, product designer, Academia.edu; Allison Kuperman, product designer, Medisas; Meghan Lazier, design researcher and strategist, U.S. Federal Government; Tyler Maltbie, senior consultant, C Space; Abby Miller, senior qualitative research manager, Magid; Barb Paszyn, research management associate, Sklar Wilton & Associates; Sonya Shen, independent research consultant and storyteller; and Erin Wagner, research analyst II, Edge Research. Each grant winner will attend the QRCA Annual Conference and will receive membership to the QRCA for the 2019 year.

### New accounts/projects

■ **Indi**, an Irvine, Calif., digital word-of-mouth engagement and monetization platform, has been selected by Indonesia-based online marketplace Tokopedia to enhance its customer engagement and user experience. Indi will provide influencer and customer engagement through a native, embedded integration in the Tokopedia app.

■ **Sky Link Media**, a U.S. Chinese entertainment and news distributor, has named **Nielsen** as its local TV measurement provider. Under the agreement, Sky Link Media will leverage Nielsen's enhanced local TV measurement services to provide agencies and media buyers with data to make informed buying decisions.

## New companies/new divisions/ relocations/expansions

■ New York-based customer acquisition marketing company **Permission Data** has rebranded, changing its name to **AdQuire Media** and launching a new company Web site.

■ Plano, Texas, company **Research Now SSI** has opened a new operations facility in Noida, India. Approximately 200 survey programmers, data processors and project managers are located in the new facility, which will support the company's global operations.

■ Information services company **Experian** has increased investment into an existing innovation center in Singapore to create the fourth Experian DataLab, adding to existing facilities

in the U.S., the U.K. and Brazil. The Singapore location will help businesses solve strategic marketing and risk management problems through data analysis, research and development.

■ Australia-based research consultancy **Nature** will open a new office in Sydney in the new year, led by James Jayesuria. The move will be in partnership with The Lab Insights & Strategy, with which Nature has a long-standing strategic and cultural insights alliance.

■ Research company **Toluna** has opened a new office in Melbourne, Australia. Roopam Bahl, director of business development for Toluna in India, will relocate to Melbourne to provide a local point-of-contact for the company's presence in Australia. As a result of Bahl moving to Melbourne, Himanshu

Verma will join the company as director of India domestic business.

## Research company earnings/ financial news

■ Research company **Kadence International**, London, has reported a 113 percent revenue increase for 2016-17. The company's revenue increased to £7.85 million over the 12-month period.

■ Research company **Toluna**, Wilton, Conn., has reported that year-over-year revenue growth of its TolunaInsights platform exceeded 40 percent. The company has also reported 20 percent year-over-year revenue growth across the overall business. Toluna says it is expecting more growth in 2019 with the continuation of investments in R&D fueling the expansion of its portfolio of automated solutions.

# THE QUIRK'S EVENT

FOR MARKETING RESEARCH AND INSIGHTS PROFESSIONALS

WELCOME!

## WELCOME TO THE PREVIEW OF THE 2019 BROOKLYN QUIRK'S EVENT!

Since 1986, Quirk's Media has been dedicated to promoting the understanding, use and value of marketing research and customer insights across all industries by delivering a wide range of free resources for marketing research professionals, from our magazine and e-newsletter to our Webinars and directories of research product and service providers.

In 2015, after seeing the need for a low-cost, inclusive conference for marketing researchers, we held the first-ever Quirk's Event in Brooklyn, N.Y., a gathering that has sold out of exhibitor and attendee space every year since.

To keep costs low for attendees and exhibitors alike, we eliminated the keynote speakers and sit-down luncheons of other industry events. By making it affordable for everyone, the goal is to maximize attendance and provide the most inclusive marketing research experience with the best ROI for all.

This year, in addition to Brooklyn (March 5-6), we have expanded The Quirk's Event schedule to include gatherings in London (February 12-13) and Chicago (April 2-3).

The Quirk's Event is a two-day experience, packed with more than 70 30-minute education and learning sessions delivered by client-side researchers or research vendors (sometimes both!) on a range of topics, from case studies and explorations of best practices to deep dives on specific methods or techniques.

Speaking slots are chosen based strictly on educational value and are not sales pitches. (Presenters must agree to adhere to the Quirk's Q-mandments, which stipulate that sessions must be interesting, informative and sales-free.)

At the center of the action is the exhibit hall, which is designed to be a fun, interactive venue for face-to-face meetings between attendees and our valued industry supporters.

In the following pages you'll find profiles of selected speakers and sessions along with overviews of networking opportunities, dining options and expo exhibitors. (While current at press time, information is of course subject to change!)

At the show, you'll find a daily agenda, map and list of exhibitors as well as information about food and drink and special exhibit hall experiences.

We want to make The Quirk's Event a regular part of your ongoing efforts to learn and grow as an insights professional, so please let me know your thoughts on how we can improve your experience.

Sincerely,

Joseph Rydholm  
Editor, Quirk's Marketing Research Review

SESSIONS

## TOP-NOTCH LEARNING

The Quirk's Event offers engaging 30-minute sessions from both client-side researchers and suppliers on the latest research trends, techniques and strategies. We've highlighted a handful of sessions here and you can find a complete detailed list of sessions at [www.thequirksevent.com](http://www.thequirksevent.com).

### BRAND LOYALTY

#### How NPR is Building a Diverse Millennial Audience

Gwynne Villota, Associate Director, Audience Insights, NPR

Building brand loyalty among the Millennial generation can be a challenge for any organization. As the use of technology evolves among these cohorts, certain mediums can find it especially difficult to create and keep young loyal audiences. With music and podcast streaming apps becoming more popular, radio stations may find themselves needing to adjust their strategies to keep Millennials interested in their content.

Gwynne Villota, associate director, audience insights for NPR, will discuss how a cross-functional team looked into the company's product and marketing to determine which was the obstacle in building a diverse Millennial audience. Villota will discuss what the team found worked and why; the research scope and approach; and provide ways to work with stakeholders across an organization.

### CASE STUDY: BLOCKCHAIN TECHNOLOGY

#### Fixing Research Pain Points: How Blockchain Will Shape the Industry

Henry Chan, CEO, PREDIQT

Blockchain is a buzzword that has made its way into the marketing research industry. But what does it really mean? And how will it impact the industry in the coming years? Henry Chan, CEO of PREDIQT, will provide an overview of blockchain technology in his session. He will also dispel the misconceptions of blockchain's shortcomings in the research industry and examine the use of blockchain in other industries. A case study will be presented as Chan gives an overview of how the technology is being used to address pain points in the research industry.

## CASE STUDY: BRAND EXPANSION

### How a Creative Research Approach is Helping the Scripps National Spelling Bee Explore Expansion

Corrie Loeffler, *Director, Editorial, Scripps National Spelling Bee*  
Suzanne Beane, *Client Director, Landor Associates*  
Roula Constantine, *Research Director, MarketVision Research*

Come hear how research helped The Scripps Spelling Bee explore expansion both domestically and internationally. Through multiple rounds of focus groups in countries such as South Africa and India, followed by creative connects, Scripps, Landor and MarketVision worked together to both facilitate and moderate workshops with parents and teachers separately. Through these three-hour workshops, they leveraged a creative approach with activity-based learning to help parents and teachers to create guides that would excite and inspire them and their students through copy and imagery. Presenters will also touch on diverse topics such as: effective vendor/client relationship management; storytelling/data interpretation; factors in conducting global/international research; how to use hybrid/mixed methods (qualitative, quant, mobile, SM) and ethnographic/observational research.

Landor

## GENERATIONAL RESEARCH

### Research and the Elusive Generation Z

Holly Carter, *Director of Product Marketing, Confrimit*

One of the biggest challenges in research today continues to be engaging the youth market – whether that's Generation Z or their slightly older Millennial counterparts. The impact of always-on, smart technology has clearly shaped the attitudes and behaviors of the youth market, making it increasingly challenging to engage them in research activities.

But opportunities do exist to capture the essence of this generation if we're willing to be agile and tailored in our research approaches. The key is to use the channels already heavily embedded in the generation's psyche, making engagement a natural process rather than a forced event. Here, perhaps unsurprisingly, mobile and social are critical. But it's not just the channels that are important, it's the way in which those channels and available technology are used.

In this presentation, Holly Carter, Confrimit's director of product marketing, will discuss how researchers can better engage Generation Z and Millennials on their terms, including: designing shorter and highly engaging surveys leveraging gamification and social media tactics; and using mobile to replicate a social approach to recording in-the-moment feedback, attitudes and behaviors.

## SURVEY DEVELOPMENT

### Research on Research: The Evolving Respondent

Scarlet Wynns, *Senior Director, Comcast*  
Peter Manickas, *Director, Comcast*  
John Schiela, *President, Phoenix Converged Technology and Media, Phoenix Marketing International*

The world is changing at a rapid pace, along with it how people interact, entertain themselves, shop, bank and yes, even how they take research surveys. Most of the time we're so focused on understanding how these changes impact the business issue at hand that we don't spend time understanding how they impact the information that we're collecting. Comcast partnered with Phoenix MI to conduct a research-on-research study to stay at the forefront of these issues. Attend this session to gain insights into: best practices in sampling, including combating fraudulent sample; the impact on scale setup and form factor in results; the impact on device type used in surveys; visual graphics vs. textual graphics in presentation; and explicit vs. implicit questioning.

#### AGILE RESEARCH

### **Broaden Your Agile Skill Set: How to Combine Consumer Insights and Experience Design Approaches to Get Deeper Insights Faster**

Jane Roach, *Digital Customer Research Scientist, American Family Insurance*  
Monika Wingate, *CEO and Co-Founder, Digsite*

Experience design (XD) researchers were some of the first in organizations to apply agile principles, using specialized methodologies to iteratively design, build and test solutions while exploring behaviors, perceptions and attitudes in-context.

As marketing and product teams look to be more agile, what can insights professionals across industries learn from XD approaches? In this presentation, American Family Insurance Digital Research Scientist Jane Roach and Digsite CEO Monika Wingate will discuss agile development and experience design approaches as well as methods and techniques that can be applied across industries. Roach will also share examples of how she has blended XD research with market research to build a complete view of the customer. By combining the best-in-class methods from consumer insights and XD research, teams can better bridge the gap between what consumers say and what they actually do. Incorporating XD research approaches to consumer insights challenges can also help teams streamline traditional workflows related to rapid, iterative development.

#### MILLENNIALS

### **Winning Casual Dining with Today's Teens**

Nina Guest, *Manager, Consumer Insights, Olive Garden*  
Mary McIlrath, *Senior Vice President/Partner, C+R Research*

As younger generations of consumers take their turn at being front-and-center in the research space, new insight becomes available in a wide variety of industries. As certain industries thrive with these generations and others begin to fall behind, companies may need to rethink how they appeal to these younger consumers. Nina Guest, manager, consumer insights for Olive Garden, and Mary McIlrath, senior vice president/partner at C+R Research, will share how their companies teamed up to understand the driving forces behind special occasion dining options for teens.

They will discuss how Olive Garden used C+R Research's YouthBeat® data from when Millennials were teens, along with social media, photos, video and imagery popular among these consumers, to understand what drives their restaurant selections. "It always surprises me how grounded and aware teens are today," Guest says. "They look for opportunities to bond and connect over dining experiences, both with family and friends. Further, teens want this 'togetherness' on their terms, whether at a restaurant or take-out at home." They will also discuss how these young consumers are similar and different to other generations. "Millennials are game for anything – they are wonderful respondents!" says McIlrath. "They are open to trying new products and are the 'great experimenters' today. Older and younger generations, raised in different economic times and with different mores, are more reluctant to try new things."

CASE STUDY: AUTOMATED RESEARCH AND THE B2B AUDIENCE

## How Dell EMC Tests and Strengthens Marketing Campaigns with Automated Research

Zahara Malik, *Senior Director of Client Services, Dynata*

Stephanie Woodstrom, *Marketing Communications, Global Marketing Campaigns, Dell EMC*

Dell EMC, an industry leader in converged infrastructure, servers, storage and data protection technologies, launches multiple digital marketing campaigns every year. These B2B campaigns target IT executives and managers and often highlight specific, quantifiable benefits of IT transformation with Dell EMC solutions. As each campaign involves multiple executions across the digital landscape, the research schedule left no time for concept testing.

In this presentation from Dell EMC's Stephanie Woodstrom, joined by Zahara Malik from Dynata, you'll learn how the team found an automated research solution that slashed concept testing from three weeks to five days. At the same time, the solution reduced costs – without sacrificing quality of insights even for a highly targeted B2B audience.

CASE STUDY: VIDEO AND CONSUMER RESEARCH

## How Video Among Engaged Respondents Can Bring Consumer Insights to Life

Matt Marontate, *SVP Sales, LivingLens*

Adam Portner, *Vice President, Client Solutions, ProdegeMR*

Video qualitative data brings a depth of emotion and actionable insights to traditional research methodologies. In this case study presentation, learn how ProdegeMR used video insights to help a client interested in sizing the pet owner market and exploring options of pet products. The client developed a 30-minute online survey and ProdegeMR, in partnership with LivingLens, incorporated an open-ended video question into the program.

Sharing learnings from developing and fielding this client survey, Matt Marontate, SVP Sales, LivingLens, and Adam Portner, Vice President, Client Solutions, ProdegeMR, will look at how researchers can combine quality sampling with the technology of embedded video analytics tools to bring quantitative insights to life.

SHOPPER INSIGHTS

## How Red Bull Identified Key Shopper Growth Segments to Optimize Need-State-based Behavioral Segments in Retail Across Channels

Laura-Lynn Freck, *Director, Shopper Insights, Red Bull North America*

In 2017 and 2018, Red Bull undertook an extensive shopper segmentation project that sought to understand shopper behaviors, attitudes, motivations and preferences related to their purchasing of beverages for energy needs in order to identify actionable shopper segments across the retail landscape. Shoppers were profiled on need-states and usage occasions for beverages providing energy and then surveyed in-depth to understand key path-to-purchase behaviors related to store choice, channel preferences and in-store patterns. Segments were identified based on economic potential and capturability.

In this session, Laura-Lynn Freck, director, shopper insights, Red Bull North America, will share how the resulting insights from this project have informed ongoing channel role and strategy initiatives and are being leveraged with retail partners to drive differentiated in-store executions.

## CONSUMER RESEARCH

### **Decoding Disruption: Understanding Consumer Expectations for Brands**

Sonya Turner, *Senior Director of Insights, 20|20 Research*  
Isaac Rogers, *CEO, 20|20 Research*

This session will share the findings and implications from a multi-phase study decoding disruption. First, the insights from a consumer study will help attendees dive into consumers' awareness and definitions of disruption, expectations of the benefits of disruption and how disruption influences their relationships with brands. The consumer phase was followed by a series of in-depth interviews with corporate researchers to focus on what disruption means to researchers, their organizations and their approaches to gathering and acting on insights. Regardless of whether your company or industry are "disruptive," the findings indicate it's rapidly becoming an expectation, a new normal – one with a definition unique to each brand. You'll walk away with a better understanding of how your brand can leverage the idea of disruption to position itself more effectively and better meet the needs of your consumer.

20|20

## BEHAVIORAL RESEARCH

### **Using Cross-Disciplinary Insights to Understand Your Customer's Journey**

Salima Nathoo, *Senior Director, Wall Street Journal Dow Jones*

Join Salima Nathoo, senior director for the Wall Street Journal Dow Jones, to hear how the company leveraged behavioral data to understand its customers' preferences in media, content and live journalism formats to gain insight into how to speak with top management readers and the kinds of stories and live journalism that would be most compelling for them. The session will discuss how behavioral data like page views and cross-over analysis, as well as results from a primary survey, provided a better understanding of consumer media preferences in order to inform content strategy and engagement. "I'm always curious about new approaches and ways of collaborating to tackle our business' toughest challenges," Nathoo says. "At Dow Jones, we're looking at business growth through the lens of our customers and as a result, we're increasingly layering behavioral analytics with traditional research to generate deeper insights and conclusions about our customers' motivations and needs."

THE WALL STREET JOURNAL

## DATA SECURITY

### **GDPR Basics for Marketers and Researchers**

James Newswanger, *Senior Research Manager, IBM*

One of the hot topics in research in 2018 was the General Data Protection Regulation (GDPR), the EU's data privacy regulation. Companies were required to comply with GDPR by May 25 or face heavy fines. While the regulation went into effect in the EU, it also affects organizations that provide goods and services or that collect and monitor data of consumers in the EU, no matter where they are located. This new regulation proved to have a large impact on marketing and research companies.

IBM

In this session, James Newswanger, senior research manager at IBM, will lead a discussion on GDPR, providing an overview of the basics of GDPR policy as well as resources for marketers and researchers to train and certify themselves and their teams. There will also be time for a Q&A, allowing attendees to participate in the dialogue.

### How PepsiCo is Accelerating Growth

*Tim Warner, VP of Insights and Analytics, PepsiCo*

Learn how PepsiCo is augmenting human creativity with advanced technology to step-change the power and speed of insights and drive consumer centricity into the heart of the organization to accelerate growth. There is a “burning platform” in the insights industry – if we don’t act we risk losing relevance. Automating insights for speed and lower cost is simply not enough; we need fundamentally better insights to become indispensable to the business.

### Unlocking Occasions with Agile Consumer Engagement

*Molly Hayes, Global Director of Brand Insights, Anheuser-Busch InBev*

ABI insights was challenged to create a consumer-centric approach to occasion activation. Through the development of an agile insights process the team now has the tools to move from brand-agnostic occasion profiles to integrated brand activation platforms in seven days.

## The best minds DRIVING YOUR MARKETING RESEARCH FORWARD

It is always our goal to offer quality learning sessions at The Quirk's Event. To do this, we reach out to your peers and ask them to share real-world experiences, strategies, case studies, best practices and successful applications of research techniques. Wondering who we have lined up to speak in Brooklyn? Here's a sneak peek.

**PRESENTERS**

### Gemi Hartojo

Relationship Marketing Manager,  
Rise Against Hunger

Gemi Hartojo is the relationship marketing manager at Rise Against Hunger, a nonprofit organization with a goal to end world hunger. She has over two decades of marketing experience building and managing brands such as Nestle, Cathay Pacific, AOL, American Greetings and Mobile Oil.

Hartojo's passion lies in utilizing data to help guide and inform the customer journeys that create opportunities for organizations to cultivate delightful customer experiences. "I like to serve and make people happy. It's what drives me," she says. "How can I serve if I don't know whom I'm serving and what they like?"

At The Quirk's Event, Hartojo will share a case study presentation, "The Role of Segmentation in the Fight to End World Hunger," discussing how Rise Against Hunger's work to uncover actionable insights has helped increase engagement and financial support.

Hartojo's interests outside of marketing include creating opportunities for minority groups.

### Peter Manickas

Director, Comcast

Peter Manickas has over 20 years of experience in market research and strategic consulting as a research supplier, consultant and currently as director, Xfinity services research for Comcast. In addition to many years working as a preferred vendor for Comcast, Manickas also worked extensively with all major MSOs (cable companies) to develop a deep understanding of the industry.

Manickas has expertise in all aspects of the market research industry including questionnaire design, multivariate analysis, business-to-business and consumer research. Over the past 10 years he has worked with a variety of Comcast teams to derive strategic research insights utilizing both quantitative and qualitative methodologies. At The Quirk's Event, Manickas will co-present the findings of a research-on-research study Comcast conducted in partnership with Phoenix MI in a session titled, "Research on Research: The Evolving Respondent."

### Scarlet Wynns

Senior Director, Comcast

Scarlet Wynns is a seasoned researcher adept at both quantitative and qualitative methods with experience across various industries and analytical areas. She currently works as senior director, research, at Comcast.

Wynns received her MFA in film and electronic media from American University in 2001 and earned her Ph.D. in interpersonal communication and media studies from UNC-Chapel Hill in 2003. She has more than 16 years of experience both on the vendor and client sides and her articles are published in peer-reviewed academic journals.

At Comcast, Wynns works with teams across the organization aligning research to eliminate redundancies, improve processes and make research more rewarding for stakeholders. At The Quirk's Event she will co-present a session titled, "Research on Research: The Evolving Respondent," which will look at the findings of a research on research study Comcast conducted in partnership with Phoenix MI.

SPEAKERS VISIT**

**TheQuirksEvent.com**

## Emily Paladino

Customer Insights Manager, Target Australia

Emily Paladino has over 18 years of market research experience, gained in both national and internationally renowned market research companies, marketing consultancies and brand consultancies across a solid range of industry sectors. She currently works at Target Australia as customer insights manager.

Paladino first turned to marketing research due to her interest in human behavior. "I was drawn to studying psychology at university," she says. "When it was time to think about how I would apply this interest to a career, I knew I wanted to overlay a commercial aspect to it and landed on market research. Market research is that wonderful intersection where marketing meets consumer psychology, which allows you to have strategic input into the design of products, fashion, store layouts and advertising."

Paladino specializes in brand, strategy and advertising development; new product development; and shopper research. At The Quirk's Event she will present a session titled, "Lessons Learned from a Decade of MROC Use."

## Steve Seiferheld

Director, Market Research  
Swedish Match

Steve Seiferheld has spent the last 20+ years in a wide variety of research types, roles and verticals. He began working at Swedish Match in April 2016 and is director, market research. Seiferheld's client-side experience includes positions at Bristol-Myers Squibb, HSN and Nabisco. A proponent for letting objectives drive methodology, Seiferheld says he focuses on choosing techniques that "make it easiest for my target audience to provide the type of feedback I need."

At The Quirk's Event Seiferheld will provide real-world examples on how research can offer greater impact for colleagues across the organization in a case study presentation titled, "Getting to Know You: Alternate Stakeholders in Your Organization."

Seiferheld holds a bachelor's degree in statistics from Rutgers University and a master's degree in statistics from Cornell University. He resides in Midlothian, Va., with his wife and two sons.

## Jane Roach

Digital Customer Research Scientist,  
American Family Insurance

Jane Roach's introduction to human factors and usability has led to more than 20 years in experience design and consumer research. Starting as a UX designer/researcher, she found herself working with marketing research to better understand consumers and customers, resulting in an overlap between UX research and MR.

In her career she has worked to introduce rapid research and agile methods in many companies. Roach is passionate about increasing speed to market through actionable customer insights. "I started as a UX designer/researcher, doing a lot of contextual and ethnographic research and usability testing," she says. "As time progressed I found myself working with market researchers to understand more about consumers and customers." At The Quirk's Event she will present a best practice workshop titled, "Broaden Your Agile Skill Set: How to Combine Consumer Insights and Experience Design Approaches to Get Deeper Insights Faster."

Roach has held positions at the University of Minnesota, Compuware Corporation and CUNA Mutual Group. She is currently the digital customer research scientist at American Family Insurance.

## Chelle Precht

President, Complete Research Connection

Chelle Precht has over 30 years of experience in the marketing research industry and currently serves as president of Complete Research Connection. She is a Burke-trained researcher, a QRCA Advance Consultant and an expert in qualitative and small data quantitative research. Precht is also a qualitative research consultant under the umbrella of Complete Research Connection and provides moderating, auditing and field management while assisting with management of her focus group facility in Columbus, Ohio.

As a qualitative researcher, Precht says she draws inspiration through helping others. "Whether it is research with patients about their disease lexicon to help doctors communicate better with them, IT professionals about backup and replication software or moms about diapers and detergent, knowing that the findings of the research I reveal can impact lives makes me come to work each day!"

Precht is presenting a session provided by the QRCA along with Bruce Ferguson, vice president qualitative research at SIRS. In their presentation, "Maximizing the ROI from Qualitative Research," they will draw on their combined experience to give insight into how to get the most out of every qualitative study.

## Nina Guest

Manager, Consumer Insights, Olive Garden

Nina Guest is an expert in the restaurant and entertainment sectors. She joined Olive Garden in 2013 and is currently manager, consumer insights. Prior to working at Olive Garden, Guest was part of the consumer insight and organization development teams at Universal Orlando where she used her expertise in guest and member satisfaction to create memorable vacation experiences. Guest has a bachelor of business administration from the University of Miami School of Business.

In her Quirk's Event session, "Winning Casual Dining with Today's Teens," presented with C+R Research, Guest will discuss how Olive Garden teamed up with C+R Research's YouthBeat® analytics group to gain insight into what drives special occasion dining options for teens.

## Corrie Loeffler

Director, Editorial, Scripps National Spelling Bee

At age 11, Corrie Loeffler was first stung by Scripps National Spelling Bee as a speller at the national finals. Today she leads a team of employees and contributors at the company to create a content package used to run spelling programs in more than 26,000 schools, program materials for regional spelling bees across the country and a communications strategy to bring all levels of the Bee into public awareness; and to execute and administer the annual national finals in the Washington, D.C., area. She has worked with the company for 12 years.

At The Quirk's Event, Loeffler will be co-presenting a session titled, "How a Creative Research Approach is Helping the Scripps National Spelling Bee Explore Expansion."

## THE NIGHT BEFORE THE EVENT

### Women in Research Networking Event

Monday, March 4  
Location: TBD

Join Women in Research (WIRE) for this complimentary pre-conference networking event for Quirk's Event attendees of all genders. Enjoy cocktails, canapés and conversation while networking with market research industry leaders. WIRE is a nonprofit organization that champions diversity in the marketing research industry by arming women with the tools to develop professionally, build connections and stay inspired. Registration for this event will be open at a later date, mark your calendars!

**NETWORKING**

INTRODUCING

### INTERACTIVE SMART BADGES

Quirk's is excited to introduce smart badges from Klik! These interactive badges allow for easy and fast networking all in one place. Attendees in close proximity can quickly exchange information simply by both pressing and holding down the bottom of the badge. Bright LEDs will illuminate and flash, letting you know that the information has been exchanged. Attendees can also receive content from speaking sessions without having to wait until after the event. During a session, simply click your badge and any materials the presenters make available will download and be accessible in the app. The Klik badge puts you in charge of the content you receive and connections you make!

With the Klik app you can:

- chat with other attendees and even request meetings;
- view profiles of exhibiting firms and request meeting times with particular vendors;
- store your connections and event materials; and
- keep track of all personal meetings and events.

## OPENING NIGHT

### Cocktails with Quirk's

Tuesday, March 5  
5:30 p.m. to 7:00 p.m.  
Marriott Brooklyn Bridge Expo Hall

We've had a blast hosting Cocktails with Quirk's in the past and The Quirk's Event wouldn't feel complete without everyone enjoying a few cocktails on us! After the first day of the show is done, mingle and network in the expo hall and take in the experiences with other attendees from 5:30 p.m. to 7:00 p.m. Free drinks and appetizers will be provided.

Stop by one of these stands to enjoy a cocktail:

### MR Musical Jam Session

Tuesday, March 5  
7:30 p.m. to 10:00 p.m.  
Location: Hill Country Food Park Brooklyn

After dinner, check out an MR Jam Session to hear talented MR musicians perform live! Quirk's will be bringing together a talented collection of musicians in the market research industry to perform. The MR Jam session is a great way to kick off the event!

Thank you to our sponsors:

### "After Dark" Quirk's Event Party presented by The Research Club

Tuesday, March 5  
9:30 p.m. to late  
Location: Kimoto Rooftop Garden & Lounge

The Research Club is heading back to Brooklyn, New York, collaborating once again with the popular Quirk's Event.

Join us on Tuesday, March 5 at the trendy Kimoto Rooftop Garden Lounge for the official "After Dark" networking mixer.

This event is exclusive to a limited number of guests. Book your tickets today.

The Kimoto Rooftop (located above the ALOFT and Sheraton Hotels) offers fabulous views across the city. Continue the evening at New York City's first Asian rooftop beer garden.

To register and book your tickets please visit [theresearchclub.com/events/brooklyn-after-dark-quirks-party/](http://theresearchclub.com/events/brooklyn-after-dark-quirks-party/)

## EVENT CLOSING

### Expo Hall Happy Hour

Wednesday, March 6  
4:15 p.m. to 5:15 p.m.  
Marriott Brooklyn Bridge Expo Hall

Grab a beer and stroll through the expo hall to learn and experience all of the latest and greatest the industry has to offer.

## EXPERIENCES

# WHO SAID MARKETING RESEARCH CAN'T BE FUN?

When we launched The Quirk's Event in 2015, the one thing we wanted to make sure our event had was some fun. We had attended numerous conferences throughout the years and found few to be truly fun and engaging. So we set out to make The Quirk's Event a genuine experience.

In addition to the great educational sessions and networking activities, the expo hall will be a lively and engaging place where you can learn the latest in the industry and find new partners ... while having fun! Stop by exhibits to play a game, enter a drawing, grab a piece of swag or experience a demo – there will be lots to see and do in the expo hall. Here are just a few of the experiences that will be at The Quirk's Event.

### Canine cuddles

What's better than a little fur-therapy? While walking around the exhibit hall don't miss the chance to snuggle with some adorable puppies. Our furry friends will be on-site for a few hours allowing attendees to take a cuddle break (or two).

### Update your image

How long has it been since you've updated your social media photo? Have a new, professional head shot taken while at The Quirk's Event. It takes just a few minutes and we'll e-mail you the link to the high-resolution image that reflects the new you!

## GAME ON!

We are excited to bring the Klik smart badges and app to The Quirk's Event. Using the smart badges and app, you can earn points by connecting with exhibitors and other attendees, attending sessions, giving session feedback and by posting on social media. The attendees that achieve a benchmark point total will automatically be entered into a drawing to win great prizes (gift cards, Alexa, portable charges, etc.). Download the Klik event app two weeks before the event to learn how to play and receive game rules.

### Let your MR worries melt away

Tiny budget? Too many projects? Let your troubles melt away, at least for a few minutes. Stop by and get a chair massage from a professional massage therapist.

### Speak your mind

We want to hear from you! Look for the video kiosk, step up to the microphone and let us know how you feel. Answer one of several questions ranging from your favorite research methodology to how you got started in the industry. After the event, Quirk's will compile a video of the responses giving you the chance to share your clip with friends and colleagues.

### Have your picture taken with a celebrity!

A loveable celebrity will be stopping by The Quirk's Event for photo opportunities each morning. Don't miss your chance to grab a selfie! Want to guess who it is? Here's a hint: This loyal friend reluctantly solves the most difficult mysteries. His go-to mode of transportation is a van painted with psychedelic colors!

## A FOODIE'S PARADISE

Whether you're looking to take advantage of the long lunch break or interested in a bite to eat after the event, the foodie restaurant scene in Brooklyn has many choices to offer. Restaurants in the borough will provide you with options ranging from fast-food chains to classic French bistros and authentic Brooklyn pizza.

## OFF THE BEATEN PATH

Quirk's has a few restaurant ideas for anyone interested in venturing beyond Downtown Brooklyn.

Steve recommends:

### THE RIVER CAFÉ

Offering a classic high-end New American menu, The River Café has an award-winning wine list and seamless service. Jackets are required; ties preferred. Reservations are recommended.

1 Water Street | 718-522-5200

Ralene recommends:

### GRIMALDI'S PIZZA JULIANA'S PIZZA

Join the legendary debate and taste the pizza at iconic Brooklyn rivals Juliana's and Grimaldi's. The pizza joints operate side-by-side under the Brooklyn Bridge. Expect a short wait at both locations.

Grimaldi's Pizza | 1 Front St.

Juliana's Pizza | 19 Old Fulton St.

Dan recommends:

### BACCARAT HOTEL BAR

If you're looking for the quintessential New York City experience, Dan recommends hopping over to the Baccarat Hotel Bar. All libations are poured into pieces of Baccarat crystal, making this the most elegant place for a nightcap.

# EXPLORING NEW YORK

If you're heading to New York for the very first time, we hope you plan to spend an extra day or two to take in the sights! New York City has something for everyone. Here are a few of our favorite spots.

## For the history buff: **THE TENEMENT MUSEUM**

The Tenement Museum, located in the Lower East Side neighborhood of Manhattan, is a National Historic Site. The two historic tenement buildings were occupied between 1863 and 2011 by an estimated 15,000 immigrants from more than 20 nations. The museum's first restored apartment opened in 1992 and today the buildings are set up to tell the stories of America's urban immigrants who inhabited the area between the 19th and 21st centuries.

## For the photog: **WALK THE BROOKLYN BRIDGE**

Experience the famous landmark up close by taking a walk over the Brooklyn Bridge. Once dubbed the eighth wonder of the world, the hybrid cable-stayed/suspension bridge opened in 1883 and connects the boroughs of Manhattan and Brooklyn. Check out a guided walking tour or grab a cup of coffee and your camera and take on the 1.1-mile bridge yourself!

## For the theater fanatic: **TKTS BOOTH**

The Quirk's team recommends stopping by a TKTS ticket booth to get your hands on day-of-show tickets for Broadway and other New York City theater events at a discount. Hit up the booth early to get last-minute tickets on a budget.

**TOURISM**

## For a celebrity encounter: **THE TOUR AT NBC STUDIOS**

Get behind-the-scenes access to some of the studios at 30 Rockefeller Plaza! From Late Night with Seth Meyers to SNL, you'll experience the entire TV production process firsthand. Tours are popular so booking in advance is highly encouraged.

## For a moving experience: **9/11 MEMORIAL AND MUSEUM**

Through exhibitions, educational programs and a memorial, The National September 11 Memorial and Museum is a tribute of remembrance to the 2,977 people killed in the terror attacks of September 11, 2001 at the World Trade Center site, near Shakesville, Pa., and at the Pentagon.

EyeSee Inc.

BOOTH 209

Understand behavior, grow further! EyeSee is one of the fastest-growing behavioral research companies in the world, based in New York, Antwerp, Paris and Belgrade. We use accessible remote behavioral methods in combination with conventional to unlock next-level consumer insights with the highest predictive value. Through highly effective methods such as online eye-tracking, facial coding, virtual shopping and surveys, we measure the impact of shopper marketing, advertising, digital solutions and innovations. For research purposes, respondents use their own devices (computers and mobile phones), thus cutting down time, costs and enabling testing on a global scale. Our teams conduct studies in more than 40 countries. We had the privilege to work with global brands in a myriad of industries, some of which are Johnson & Johnson, Twitter, Microsoft, Viacom, Nestlé and many others.

[eyesee-research.com](http://eyesee-research.com)

Fieldwork Inc.

BOOTH 608

Fieldwork Inc. has provided recruiting, facilities and online tools for research professionals for over 35 years. ### Insight Management Academy

REGISTRATION HALL

The Insight Management Academy is the center of excellence for insight generation, insight management and insight communication. We provide consultancy, training, benchmarking and best practice research to help insight teams all over the world to work more effectively. The IMA began its best practice work in 2003 when its founders, Steve Wills and Sally Webb, published a best practice report on customer insight management and communication. The companies involved in the research which led to the report, including Boots, British Gas, Nokia, Sainsburys, Vodafone and Royal Bank of Scotland, said that they would like to take part in a regular forum where they could continue the discussions about best practice. Since early 2005, the Insight Forum has met every quarter in London, and the IMA was created so that more organizations could contribute their experience and discuss the best ways to make insight make a difference. If you would like your organization to join us and help to define, develop and disseminate insight best practice, then please become a corporate member.

## Marketing Research Education Foundation (MREF)

REGISTRATION HALL

Education is a powerful thing. It is the most influential element for bringing positive and lasting change. Unfortunately, many children don't have access to it. The marketing research industry is compiled of highly intelligent individuals who want to use their education to inspire others. That's why The Marketing Research Education Foundation (MREF) was created. MREF is an international foundation dedicated to enhancing the educational opportunities for children and youth worldwide. MREF is a high profile, industry-wide initiative that involves researchers from every level of the marketing research industry across the globe. The foundation will use financial and human resources to provide the tools necessary to give children access to a quality education. MREF funds projects that promise to improve education worldwide, and seek to unite researchers from around the world to help, whether through teaching, building a school, installing computer libraries or simply reading to children. With these efforts, MREF hopes to transform the lives of children through education, thus improving the well-being of communities around the world. Get Involved! Give Back! Our Stories: <http://mrgivesback.org/newsevents/>

### Olson Research Group

BOOTH 502

Olson Research Group has been supporting the life sciences sector for more than 24 years by providing both qualitative and quantitative market research services and harnessing the latest technological offerings. What drives our deliverables is our proprietary database of health care professionals, payers and patients who represent all corners of the health care space. The database is continually refreshed with new participants and thus differs from static panels that reach out to the same respondents repeatedly. The industry-experienced professionals housed in both our East Coast and West Coast offices proudly provide a full spectrum of services, from pure fieldwork/recruitment to the full execution of projects; from survey design to analytical outputs, using qualitative and quantitative research methods.

### Paramount Market Publishing

REGISTRATION HALL

We are dedicated to bringing the best marketing books to your attention and then getting them to your desk quickly. Our books are designed so you can extract a large amount of information in a short period of time. We believe you should learn something every time you open one of our books – whether you have five minutes or two hours to spend. The books we publish have many charts, tables and margin notes. They are well-organized with a good table of contents and a thorough index. Good information can easily get buried within the pages of a manuscript. We want you to be able to locate important pieces of information quickly when you need it. And finally, a good presentation helps you remember what you've read, that means you look smart when you share the information with others! Stop by our bookstore at the Quirk's Event!

## RTi Market Research and Brand Strategy

BOOTH 412

At RTi Research, we turn data into meaning, something that can be communicated simply and acted upon effectively. For nearly 40 years, we've been bringing the customer voice to the corporate decision-making process through our wide range of quantitative and qualitative marketing research services and methods. What's different today are the technologies that allow us to gather and mine enormous amounts of data and the resulting struggle to figure out what it all means. Navigating this starts with understanding when to leverage new, innovative data collection and analytic technologies, techniques and methods or when a traditional approach is best; and culminates in finding meaning in all that data and sharing it through innovative storytelling. Turning data into meaning is how we support our clients' success.

[www.rtierearch.com](http://www.rtierearch.com)

## Russell Research

BOOTH 316

Russell Research provides global expertise and CX-focused tools to deliver insights to transformational B2B and B2C organizations in order to navigate continual change. **Vault**  
Accounting, Analytics, Research.

**Vault Consulting**

BOOTH 106

Centrac – A Division of Veris Consulting is now Vault Consulting. Vault Consulting LLC offers full-service custom primary market research to strengthen decision-making for our clients working in health care/medical, B2B, industrial, consumer, intellectual property, associations and other categories. Using a consultative approach, Vault designs and executes innovative quantitative and qualitative research in the U.S. and globally. Balancing traditional and new MR, we are a leader in deploying emerging techniques for custom solutions including: B2B mock committees – recreate

interdisciplinary decision-making processes and learn how to positively impact outcomes by observing key decision makers in action; virtual concept validation – simulate real-life scenarios (online or in-person) for hands-on interaction involving customers early and often to reduce risk; agile research – quick without cutting corners; video capture – embed an “answer by video” option to one or more open-ended questions in an online or mobile survey. We specialize in difficult-to-reach targets, innovative and fresh methodologies and transferring best practices across industries. Vault's custom solutions also include a premier suite of highly specialized services in the areas of outsourced accounting and survey research.

## GET TO KNOW THE QUIRK'S TEAM

The Quirk's Event is run by a family-owned-and-operated business that has been dedicated to serving the marketing research industry since 1986. It is our mission to be the marketing research information source for those who conduct, coordinate and purchase research products and services – and what better way to do this than through an industry event!

The team that provides your go-to MR resources throughout the year is the same team that works the event floor. We create the best event experience possible by employing expert event managers, a tech-savvy attendee liaison, professional journalists and a dedicated sales staff.

MEET QUIRK'S

### Steve Quirk

President and Publisher

Steve began his full-time career at Quirk's in 1994. As president, Steve oversees Quirk's staff and all daily operations and ensures that Quirk's is offering its audience the best marketing research content possible.

### Dan Quirk

Vice President of Marketing and Product Development

Dan began his career at Quirk's in 1993. His focus is on developing future strategies and engaging with industry end clients. At The Quirk's Event, he rings the chimes.

### Kari Rice

Event Manager

Kari has been The Quirk's Event manager since its founding in 2015. She is responsible for the overall execution of the event. Kari has over 10 years of experience managing events and is a Certified Meeting Professional (CMP).

### Katie Kulp

Speaker Liaison

Katie joined The Quirk's Event team in 2017. This year she will be overseeing all event speakers and presentation rooms, ensuring it is a rewarding experience for them. Katie has organized and managed over 400 events in her career.

### Ralene Miller

Audience Development and Tech Guru

Ralene joined Quirk's as the directory editor in 2014. In addition to managing Quirk's audience, she has provided expert technical support at The Quirk's Event since its launch in 2015.

### Tina Mincks

Senior Registration Manager

Tina has been with The Quirk's Event since its inception. She is responsible for the entire registration process, from software setup to registration customer support and on-site execution.

## Rachel Carpino

Registration Manager

Rachel is the newest member of The Quirk's Event team. She heads up the registration team, ensuring attendees have a smooth and friendly experience.

## Joe Rydholm

Editor

Joe has been editor of *Quirk's Marketing Research Review Magazine* since 1988. He coordinates with industry experts to produce articles and Quirk's Event sessions that are timely, practical and useful.

## Stewart Tippler

Head of European Sales

Stewart joined Quirk's in January 2018 after serving as the event manager of the Insight Show. In his role with Quirk's, Stewart leads the company's European market outreach.

## Evan Tweed

Vice President of Sales

Evan began his career at Quirk's in 1990. As VP of sales, he works with clients to optimize their presence in Quirk's print publications, e-newsletters, Web site, The Quirk's Events and more.

## Ilana Benusa

Account Executive

Ilana is an account representative who works with her clients to ensure they get maximum visibility within the Quirk's brands. She joined Quirk's in 2014.

# We're here to HELP!

## Lance Streff

Account Executive

Lance joined Quirk's in 2007 as a sales representative, selling advertisement space for the print publications, e-newsletters, Quirk's Web site and The Quirk's Events.

## Sara Cady

News and Content Editor

Sara joined Quirk's in 2015. She is the editor of Quirk's Daily News Queue and works with research companies to produce Quirk's sponsored content.

# INDEX OF ADVERTISERS

••• This issue of Quirk's is made possible by our valued advertisers. Their ongoing support - along with that of the other companies and organizations that market themselves on our Web site, e-newsletter and related outlets - helps us bring you Quirk's and all of its associated resources. When you contact the organizations listed below, let them know you saw their ad in Quirk's!

## 10 minutes with...

**Gwynne Villota**

*Associate Director, Audience Insights, NPR*

*“It’s hard for anybody to truly buy in on the results and implications of a project when all they get is a long PowerPoint deck at the end.”*

### **We so often hear about the challenges of working on a small insight team. What are some of the benefits?**

I love the diversity of projects I get to work on. One of the things I worried about when I left consulting to come to NPR was whether I would get bored or stuck in a rut. Luckily that has not been the case! On any given day I may analyze ratings for our shows, design a new custom survey that we’ll run in our panel or try to make progress on how we measure our audience across platforms. My brain gets pulled in a lot of different ways and that keeps me interested and engaged.

### **Do you have any tips for client-side researchers looking to get more attention from the C-suite?**

There are a couple of strategies that have worked well for us. One is bringing our internal clients along with us from the beginning of a project through to the final results. It’s hard for anybody to truly buy in on the results and implications of a project when all they get is a long PowerPoint deck at the end. We try to be in frequent communication with the key users of a study along the way, giving them the chance to shape the scope, get a peek at the initial findings and then plan the rollout to the rest of the organization.

The other approach we’ve had some success with is creating something other than just a PowerPoint deck – ideally something tangible – with the results. In one case this meant creating a small deck of cards that summarized the findings and asked, “How might we...?” questions based on the findings. Our training team used them to facilitate strategic conversations about content and products. In another case we created Sankey graphs that presented data in a new way. Both made an impression.

### **What excites you about coming to work each day?**

NPR is full of smart, inquisitive people who believe wholeheartedly in our mission to inform and engage the public. Presenting audience findings to journalists who are trained to ask tough questions can be intimidating. But no one ever asks a hard question maliciously or tries to undermine you. We are all just trying to make ourselves smarter and our content more relevant to our audience.

Gwynne Villota will be presenting a session titled, “How NPR is Building a Diverse Millennial Audience” at The Quirk’s Event in Brooklyn, N.Y.

Read the full interview at [www.quirks.com/articles/2019/20190222.aspx](http://www.quirks.com/articles/2019/20190222.aspx).
